

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

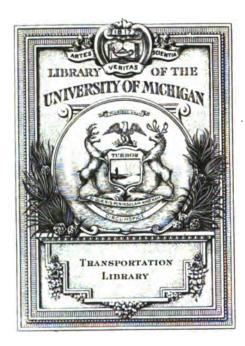

We also ask that you:

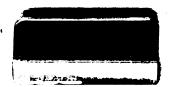

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

MESSAGE OF THE PRESIDENT.

To the Senate and House of Representatives:

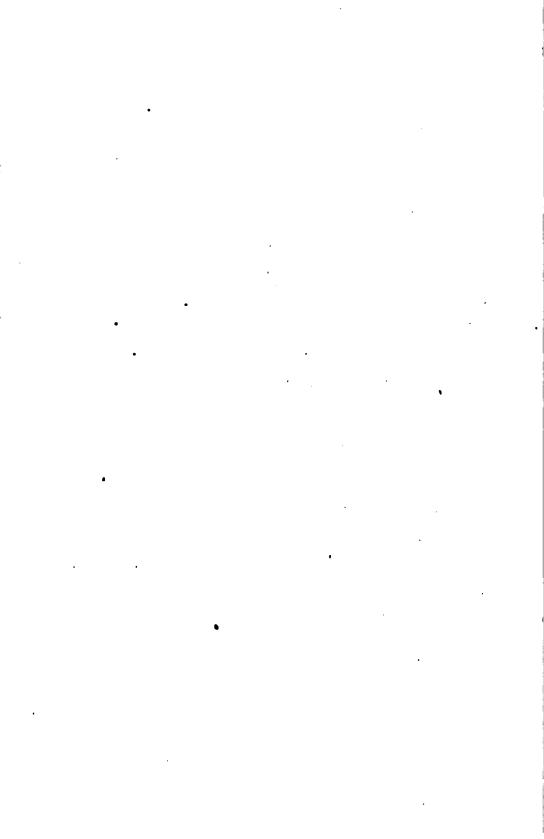

I transmit herewith the Fifth Annual Report of the Commissioner of Labor.

BENJ. HARRISON.

EXECUTIVE MANSION,

Washington, April 18, 1890.

ō

LETTER OF TRANSMITTAL.

DEPARTMENT OF LABOR, Washington, D. C., March 31, 1890.

SIR: I have the honor to transmit herewith the Fifth Annual Report of the Commissioner of Labor. This report relates to the railroad labor of the country.

The investigation, the results of which are herewith given, was commenced by the Bureau of Labor in April, 1888, under the approval of the honorable Secretary of the Interior. By an act approved June 13, 1888, the Bureau of Labor was abolished and the Department of Labor created, and the work undertaken by the Bureau was carried out by the Department, there being no change in the official designation of the head of the office; nor was the characteristic work of the Bureau of Labor changed, except by enlargement, by the act creating the Department of Labor. I have, therefore, designated this report the Fifth Annual Report of the Commissioner of Labor, while it is in fact the first annual report of the Department of Labor. I have felt this course to be wise in order that the harmony of numbering reports on a series of industrial topics may not be interfered with.

The report represents the results of the labors of only a part of our force. The field work, which was commenced in April, 1888, was practically closed in April, 1889, such members of the agency force being employed upon it as could be spared from other duties and as were found necessary. The chief work of the Department of Labor since it was created, in June, 1888, has been in accordance with one of the specific instructions of the law creating it; that is, the collection of data relating to the cost of producing articles in the United States and in leading countries of the world which come into competition with the United States, the efficiency of labor, and the cost of living in the production

of such articles. This work, therefore, on the railway labor of the country has been incidental to the greater work in hand. The results of the work on the cost of production will be forwarded to Congress, in accordance with law, in a series of reports, the first relating to the iron and steel industry, the second and third to the cotton and woollen industries, respectively, and other reports comprehending a variety of productions. I am in hopes to be able to forward the first of this series before the close of the present session of Congress.

I am very glad to acknowledge the courtesy and generosity of the managers of railroads toward the Department in the conduct of this investigation relating to railway labor. I recall but few instances in which managers of roads have refused to allow free access to their vouchers and pay accounts, and in many instances they have without hesitation, when they have understood the purpose of the investigation, forwarded their year's payrolls to the Department for tabulation. This action on the part of railway officials indicates the increasing confidence of the public in the integrity of official statistics.

I also wish to acknowledge the continued and valuable services of Mr. Oren W. Weaver, the chief clerk of the Department, and to thank the field and clerical forces for their arduous services in collecting and tabulating the data used in this report.

Section 8 of the act creating a Department of Labor specifies that the Commissioner of Labor shall annually make a report in writing to the President and Congress of information collected and collated by him, and that each report shall also contain such recommendations as may be deemed calculated to promote the efficiency of the Department. In compliance with this latter clause, I would most respectfully recommend that the clerical force of the Department be increased by providing for at least four statistical experts and from six to eight clerks of class one. The tasks which Congress has assigned to this Department render it absolutely necessary that the best skill be employed in its operations. The Department has little work suited to the lower grades of clerical labor. Mathematical skill and the ability to analyze as well as to comprehend statistical problems are among the qualifications essential to Many men come to the work of a department of this kind well equipped in a general way, but will fail in the specific duties required of them. So the clerical force as well as the field force of the Department has to be selected with a great deal of care. Under the present system of appointments the Department is able to continue the

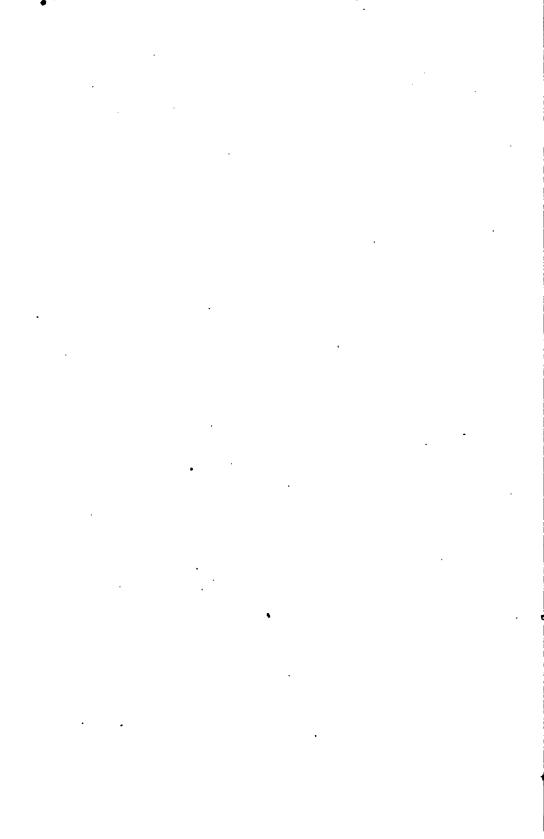

services of men who have become expert through experience, and by this expertness more and more competent to perform the exacting duties which have been assigned to them. The Department is fortunate in having been able to secure the services of some exceedingly expert practical statisticians.

I am, very respectfully, your obedient servant,

CARROLL D. WRIGHT,

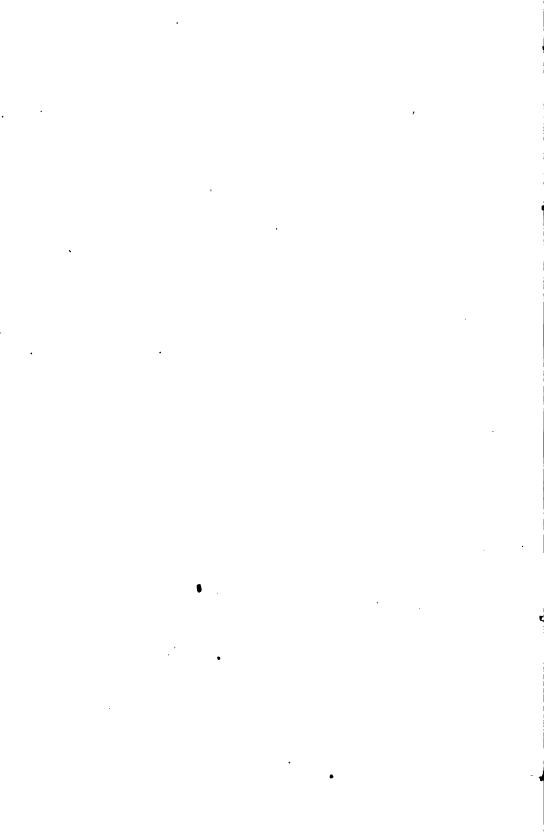

Commissioner.

The PRESIDENT.

CHAPTER I.

INTRODUCTION.

CHAPTER I.

INTRODUCTION.

The whole number of railroad corporations in the United States on the 30th of June, 1889, was, approximately, 1,718, and the mileage of these roads, approximately, 156,400. The number of employés on all the railroads of the country at the date named was 689,912; the "trainmen" numbering 135,580; "switchmen," "flagmen," and "watchmen," 31,896, and "other employés," 522,436. (a) By the 1,718 railroads is meant corporations, companies which have been formed for the construction of roads and which have actually constructed them, so that they make reports of their operations. Many of them are very short roads and of no great signification. Nearly six hundred of them are under twenty miles in length, the shortest road in the country being fourteen one-hundredths of a mile long. About eight hundred of the total number of roads are operating roads, the others being leased or controlled by them. As a matter of fact, the railroad business of the whole country is under the control of about six hundred roads, the remainder of the operating roads being of minor importance.

The purpose of this investigation was to find out as accurately as possible the relations of railway employés and the corporations under which they work, the wages paid in all branches of the service and in different parts of the country, and the time lost as well as other matters of vital interest to railway employés. To secure the facts the investigation was divided into two parts, the facts as to the relation of employés and corporations being collected on a specific schedule of inquiries by the special agents of the Department, while the time and the earnings of the employés were taken directly from the payrolls. It

a These statements relative to the number of railroads in the country, mileage, and number of employés have been kindly supplied me by the Interstate Commerce Commission. It is not claimed by the Commission that they are complete, but that they are nearly so. Probably there are a few more corporations than the number stated, and it is quite impossible, for reasons given in the Commission's annual reports, to state exactly the mileage of the country, but it does not vary materially from that stated. So as to the total number of employés, there are a few thousand more, undoubtedly, than the number given; but for the purpose of this report the figures stated are sufficiently accurate.

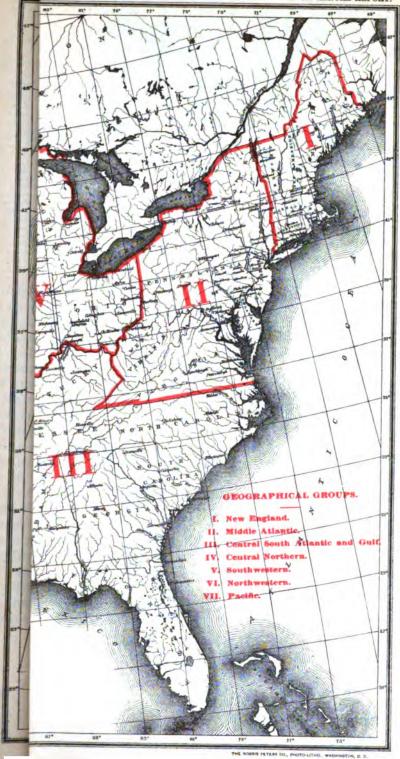

was impossible, of course, to cover in its entirety the railroad industry of the United States, but it was necessary to cover a sufficient number of roads representing all parts of the country and all conditions of railroad labor to make the investigation absolutely representative in character. Railway managers were generally willing to furnish the Department with the required information, but as a rule did not desire the names of their respective roads to be given individually. In order, therefore, to locate roads geographically, so as to represent general conditions, the country was divided into seven groups (shown on the accompanying map), as follows:

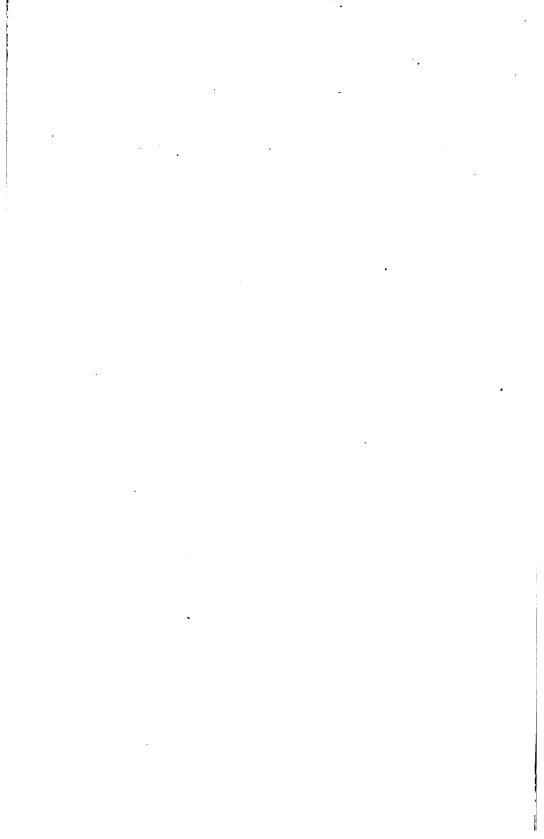

GEOGRAPHICAL DISTRIBUTION OF ROADS.

Geographical groups.	States constituting each group.	Number of omployés.
L-New England group	Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut.	24, 911
II.—Middle Atlantic group	New York, New Jersey, Pennsylvania, Delaware, Maryland, District of Columbia, Virginia, West Virginia.	113, 086
III.—Central South Atlantic and Gulf group.	Kentucky, Tennessee, North Carolina, South Carolina, Georgia, Florida, Alabama, Missis- sippi, Louisiana.	8, 739
IV.—Central Northern group V.—Southwestern group	Ohio, Michigan, Indiana, Illinois	58, 470 27, 033
VI.—Northwestern group:.	Iowa, Wisconsin, Minnesota, Nebraska, North Dakota, South Dakota, Wyoming, Montana.	11, 567
VII.—Pacific group	Washington, Idaho, Oregon, California, Novada, Utah, Arizona.	3, 104
Total	***************************************	241, 910

The aim in this grouping has been to bring together those localities in which the general conditions of labor were practically harmonious and of a like character. The investigation covered sixty different roads, employing 241,910 persons, and these roads are treated throughout this report by number instead of by name, the table following, in conjunction with the one above, indicating their geographical location. This description and location are sufficient for statistical purposes. It must not be supposed, however, that because a road is classed within the limits of a group, it is always entirely so, for it may extend somewhat into an adjoining group; but the roads are all or principally within the group, as classified.

The road numbers and the group in which each number is located, and the number of employés of each of the sixty roads selected, are all shown in the following statement:

Road number.	Group.	Number of em- ployés.	Road number.	Group.	Number of em- ployés.	Road number.	Group.	Number of em- ployés.

ROAD NUMBERS, ETC.

It will be seen by a glance at the foregoing table that the sixty roads must be thoroughly representative, for, in the first place, they are widely scattered, except so far as group II is concerned, and, in the second place, they represent roads employing from the small number of 19 people to the large number of 44,787. While only sixty roads have been covered, constituting but a small fraction of the total number of roads in the country, these roads represent, practically, a little more than one third of the labor of railway employés. This fact further demonstrates the representative character of the roads from which data have been obtained for this report.

A very large proportion of the roads which have furnished information for the use of the Department are in group II, consisting of the states of New York, New Jersey, Pennsylvania, Delaware, Maryland, District of Columbia, Virginia, and West Virginia. This has occurred from the fact that group II is emphatically a railroad group in business operations and a large number of the most important roads in the country center there. This condition renders group II the most thoroughly American railroad group in the country.

The results of the investigation, so far as figures alone are concerned, are practically contained in chapter IV, and are shown in five general tables, the first table covering ten representative roads, as is explained further on:

TABLE I.—Classified time and earnings; a table showing the number of days each employé of each of ten selected roads was actually employed during one year, the daily rates at which employed, and the classified earnings for a year, the whole showing being by occupations.

TABLE II.—Classified time and earnings. In this table all the facts shown in the preceding table for ten roads are summarized for the whole sixty roads covered by the investigation, grouped as to rates.

- Table III.—A condensed summary of classified time and carnings for all the employes of the sixty roads, grouped as to rates.
- TABLE IV.—Also a condensed summary of classified time and earnings, but showing percentages of employés by groups of rates.
- Table V.—Average time and earnings for each railroad of the whole sixty covered by the investigation. In the preceding table, time and earnings have been shown on the classified basis; in this table time and earnings are reduced to averages for each occupation in each of the whole number of roads covered by the investigation.

Table I does not give the facts for the whole sixty roads, because the detail of time and wages shown in that table, if given for the whole sixty roads involved, would make a volume altogether too bulky for the value to be derived from the table. Ten roads, therefore, have been selected for this detail table, with a view to bringing forward the details for representative localities. The roads selected for table I, the groups to which they respectively belong, and the number of employés for each road are as follows:

Road number.	Group.	Number. of em- ployés.	Road number.	Group.	Number of em- ployés.	Road number.	Group.	Number of em- ployés.
16 20 21	II III V	7, 410 6, 328 8, 098 27, 033	87 38 43 44	VII II IV	6, 178 3, 104 3, 839 4, 616	4658	VI VI	8, 888 11, 567 76, 561

ROAD NUMBERS, ETC.

Table I, then, comprehends 76,561 employés, selected from the groups and from those where the conditions are characteristic of the group, as a whole.

Table II, however, relating also to classified time and earnings, is a summarization of the facts shown for the whole sixty roads, and not simply for the ten which comprise table I.

So of tables III, IV, and V—they relate to the whole sixty roads.

The accuracy of the statistics herewith presented cannot be doubted, for in every instance, so far as the wage side of the investigation is concerned, the facts have been taken by the agents and experts of the Department from the payrolls of the roads, each man's account in each road having been carried through for the year or for such part of the year as he may have been employed. The features of this method and the scientific and unscientific character of wage statistics will be brought out when treating of the wage side of the investigation, under chapter III.

Several features originally contemplated, within the scope of this investigation, have been left out of it because after it was commenced

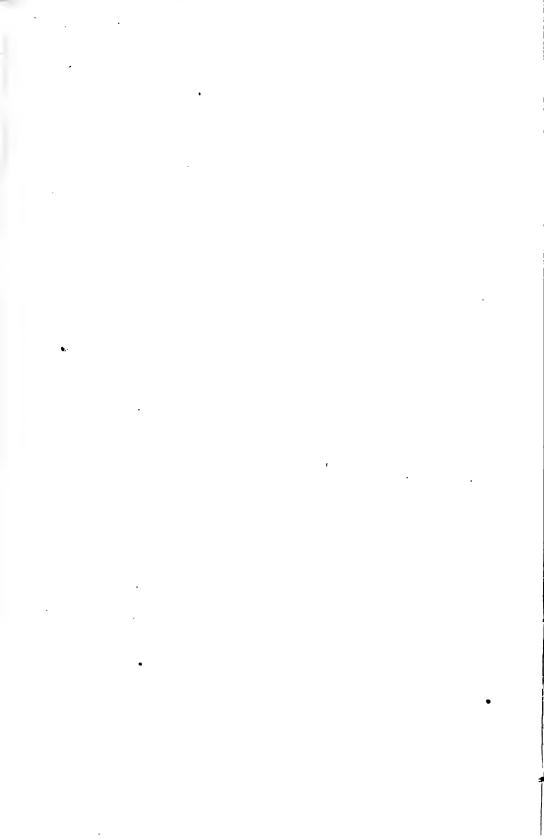

he Interstate Commerce Commission, in sending out its admirable blanks for annual returns from all the railroads in the country, legitimately covered these features, and it was not desirable to undertake to duplicate them. As the work of the Interstate Commerce Commission progresses it will accumulate the most valuable information, not only concerning the peculiar features of railroad business for which the Commission was created, but on matters relating to the welfare of railway employés.

H. Ex. 336-2

. •

CHAPTER II.

RELATIONS OF EMPLOYÉS AND CORPORATIONS.

CHAPTER II.

THE RELATIONS OF EMPLOYÉS AND CORPORATIONS.

During this investigation the endeavor was made to ascertain the restrictions, privileges, and responsibilities attending railway labor, and quite satisfactory success resulted from the inquiries. As stated in the preceding chapter, the real railroad business of the country is performed by about six hundred corporations. Nearly all of these have replied to the inquiries of the Department, giving either affirmative or negative answers.

The first question coming under the head of relationship was one referring to

RESTRICTIONS PLACED ON THE USE OF INTOXICATING LIQUORS.

It is gratifying to learn that three hundred and seventy-seven companies prohibit the use of intoxicating liquors on the roads under their control. The remainder either have no rules on this subject, preferring to pass upon each case as it might occur, or they have modified restrictions, such as not allowing men to drink to excess, or requiring men to be temperate in their habits, or discharging men for habitual intemperance or drunkenness. It is only a few years since any road first placed restrictions upon the men employed with reference to intoxicants, and now, as stated, three hundred and seventy-seven roads practically prohibit their use; and these roads are the most influential ones, employing a very large proportion of all the railway employés in the country.

Another inquiry related to

DWELLING HOUSES

furnished by corporations for the use of employes. Only twenty-five roads gave affirmative information in this respect, although one hundred and forty-nine furnish dwellings to section hands, section masters, road-bed hands, trackmen, watchmen, etc., in remote places, and for temporary use as the exigencies of the service may require. Two hundred and fifty-three companies answered directly in the negative that they furnish no houses for the use of employes.

BENEFICIARY INSTITUTIONS.

Only nineteen roads state that they maintain such institutions, three hundred and ninety-one stating that they do not. A few roads, however, pay hospital expenses while the men injured in service are being treated; a very few pay taxes for the support of state and county institutions, three or four contribute to relief funds, and several furnish clubhouses and libraries for the use of certain classes of employés. Fifteen roads state that they assist outside beneficiary institutions, twenty contributing to the Young Men's christian association as it conducts its work upon railroads; twenty-one roads contribute to the expenses of outside hospitals, and half a dozen contribute to regularly established railroad associations for the benefit of railway employés. As a whole, however, it cannot be said that the railroad corporations of this country, to any great extent, either maintain beneficiary institutions of their own or that have been established for their own employés, or assist outside beneficiary institutions. The sentiment, however, is growing in this respect. The difficulty lies in the adjustment of details. The Department did not push this feature of its inquiries to the extent it would have been glad to carry it, because, pending its investigation, the Interstate Commerce Commission secured data which it has freely placed at the disposal of the Department of Labor.

From the third annual report of the Commission it is learned that the Atchison, Topeka and Santa Fé railroad company formed a relief association in May, 1887. Its object is to furnish medical and surgical attention to the sick and injured employés of the companies embraced in what is known as the Santa Fé system. Every employé of the company is a member of this association. There is no capital stock, the fund being supported by fees deducted from the employe's compensation, the fees varying from 25 cents to \$1 per month, according to the amount of wages paid. The total receipts from members, contributions, and otherwise, for the year 1888, were \$135,335.92, while the total operating expenses were \$115,227.25. The total number of employés who received relief during the same year was 18,704. The eating houses along the lines of the roads of this system are required to give trainmen meals at 25 cents each. The company has eleven reading rooms, located at division points, and generally rooms for library purposes are located in the stations or other buildings, while in several instances separate buildings are provided for this purpose. At nearly all these points two good, large rooms are furnished, one for reading and writing purposes, and the other convenient for games. The reading rooms contain on an average about 350 books each. In most instances employés are permitted to take the books to their homes, on making a small deposit with the agent. First class newspapers and periodicals are subscribed to by the railroad company for use in these reading rooms. The games allowed are cards, checkers, dominos, etc., but gambling is strictly `orbidden.

The Atlantic and Pacific railroad company has no insurance fund, and has never attempted to establish one, but it has a hospital fund which enables sick and injured employes to receive necessary medical and surgical attention free of charge. This fund is maintained by contributions from every employé of the company, employés receiving less than \$100 per month paying 50 cents monthly, and those receiving \$100 or over contributing \$1.

This company has eating houses at division points, and meals are furnished its employés for 25 cents each.

Reading rooms at division headquarters, having all local dailies and dailies from principal cities, and popular weekly and monthly papers and magazines, have been established. The company also maintains libraries. The expenses of the reading rooms are borne by the company.

The Baltimore and Ohio railroad company has a fund provided for its employés, on which they have a right to draw in case of inability to earn wages on account of sickness or accident, and from which payment is made to their families in event of death. This fund is created and maintained by monthly contributions from employés, and contributions in money and other valuable considerations by the company itself. It is controlled by a committee of the board of directors of the railroad company, assisted by advisory committees elected by the contributing employés. The Baltimore and Ohio employés' relief association was established May 1, 1880, and was incorporated by an act of the general assembly of the state of Maryland May 3, 1882. charter, however, was repealed April 1, 1889, when the association incorporated by it was merged into the present relief department, which comprises three features, viz: The relief feature, the savings feature, and the pension feature. The relief feature affords relief to its members entitled thereto when they are disabled by injury or sickness, and to their families in the event of their death. The savings feature affords opportunity to employés and their near relations to deposit their savings and to secure interest thereon, and it enables employés only to borrow money at moderate rates of interest, on easy terms of repayment, for the purpose of acquiring or improving a homestead, or of freeing it from indebtedness. The pension feature makes provision for those employés who by reason of age or infirmity retire from active service. All claims are submitted to the superintendent of the relief department, whose judgment is final, subject only to appeal to the advisory board. The company's officers testify to the good feeling of the large majority of the employes toward this relief institution. This good feeling is evidenced in many ways, the most striking of which was exhibited on the 1st of April, 1889, when the old association was merged into the relief department, and each member of the old association was asked to become a member of it. Ninety-eight per cent. of the employés secured membership in the new department, the 2 per cent. declining being composed mainly of switchmen and brakemen in the

vicinity of Chicago. The company maintains no reading rooms or other places of resort except at Columbus, Ohio, at which point the union depot company furnishes lodging for passenger conductors, brakemen, and baggagemasters, the expense of which is charged to all the roads using the depot. It has, however, a reading room at Mount Clare shops, Baltimore, and a library containing ten thousand volumes of the best reading matter, together with all the best technical and scientific journals, all of which are always accessible. The employés avail themselves very liberally of the advantages secured to them, and textbooks and mechanical journals are eagerly sought for. Books are forwarded to the employés and returned to the library by the company without charge to those using them; but while the library room at Mount Clare has been open at all hours for the use of employes, and this fact has been liberally advertised, no one takes advantage of it. Attempts have been made by the company to establish reading rooms at Garrett, Indiana, and at Martinsburg and Keyser, West Virginia, but they proved unsuccessful. Concerning the relief association, its secretary, Mr. S. R. Barr, states:

The association has grown into almost universal popularity with the employés, dating from the time its practical operation began to be felt among them. This fact is evidenced not only from the personal expressions of members themselves, but from the fact that a very large number of those leaving the service of the company retain their interest in the natural death feature; that although it was optional at the time of inaugurating the association for all persons then in the company's service to become members or not, it is difficult to find to-day any one of these old employés who is not a member, and of those who are not members nine-tenths would become such if they had not become debarred by reason of their age and infirmity.

The employés of the Boston and Maine railroad company have a mutual insurance arrangement among themselves.

The Central Vermont railroad company has an arrangement with an insurance company to insure its men against accident, but does not arrange for insurance against sickness. This insurance arrangement has been entered into pending the action of the board of directors upon a proposition presented by Mr. J. W. Hobart, the general manager, to create a protective organization composed of railway employés on the basis of a monthly tax of a small amount to be deducted from their wages, and added to the amount derived from an investment of \$10,000 to be presented by the board of directors out of the securities of the railroad as a nucleus of a fund to care for the sick and wounded, or, at death, to pay a stipulated sum to the families of the deceased, and also to care for the aged and infirm. The employés of the Central Vermont generally favor this plan rather than insurance. This company has a large railroad library composed of scientific, historical, and religious books, as well as those of a lighter character, from which the men can draw under proper regulations. This library is much used, and is looked upon as being a great moral regulator of the men.

The Chesapeake and Ohio railway company has no insurance fund or guarantee fund of any sort, but when an employé is injured in its service, whether through his own fault or otherwise, it makes an allowance to him while unfit for service. It also provides reading rooms for its employés and arranges for eating and lodging houses for its trainmen when away from home.

The Chicago and Grand Trunk railway company provides reading rooms and rooms for sleeping and bathing for its train employés and mechanics at several of its terminal points.

The Chicago, Burlington and Quincy railroad company maintains an insurance or guarantee fund for sickness, accident, and death benefits, under the title of the Burlington volunteer relief department. Its benefits are shared not only by the employés of the Chicago, Burlington and Quincy railroad, but by those of the other roads of the Burlington system operated by it. The fund is raised mainly by monthly voluntary contributions of employés and the interest paid by the company on moneys awaiting disbursement, incomes from investments, and such appropriations as the road may make in accordance with its guarantee. As the company pays all of the operating expenses of the relief department, every dollar of the fund is paid to members who are sick or injured, or, in case of their death, to their families or designated beneficiaries. Mr. E. P. Ripley the general manager of the Chicago. Burlington and Quincy railroad company, writing concerning the reasons which led to the establishment of the relief department, and the feeling in respect to it which exists on the part of the employés, says:

The object of the company in establishing a relief department was to enable its employes to make provision for themselves and families at the least possible cost to them in the event of sickness, accident, or death. The company has established this department not only because it has the interest of its employés at heart, but because it believes that the department will serve to retain and attract a good class of employés, lessen the amount of discontent caused by improvidence, diminish the amount of litigation in cases of accident, and increase the good will of the employes toward the company and their confidence in the good will of the company toward them. Employés have been somewhat suspicious of the motives of the company in regard to this department, but there is now, I am glad to say, a growing feeling in favor of it as the regulations become understood and as the practical advantages of the department are made manifest by the prompt payment of benefits.

This company assists the railroad branch of the Young Men's christian association by subscription, and its reading rooms, which are located at the principal points, are always open to the men.

The Chicago, Milwaukee and Saint Paul railway company has recently established reading rooms at two points on its lines, and it also subscribes to the railroad branch of the Young Men's christian association, which has reading rooms at other points.

The Chicago, Saint Paul and Kansas City railroad company supports reading rooms at several points, and at one of the divisional centers there is a clubhouse erected for the use of the employés, both for reading rooms and for sleeping rooms.

The Chicago, Saint Paul, Minneapolis and Omaha railway company contributes to the support of reading rooms at several points on its line.

The Cincinnati, Hamilton and Dayton railroad company has an employés' mutual benefit association, which was formed in October, 1876, for the purpose of creating a fund for the relief of its members during injury and to provide for their families in case of death. Prior to that time the sole dependence of disabled employés and their families upon private subscriptions and gifts led to the organization of this association, which in the past twelve years has been very efficacious and satisfactory. The fund from which the members, in case of accident, have right to draw, or from which payment may be made to their families in case of death, is provided by assessing each surviving member \$1 at the death of any member of the association; but the endowment shall not exceed the sum of \$500, and any surplus arising from a death assessment over and above \$500 shall become a part of the contingent fund, out of which, at the rate of \$5 per week, assistance is given to injured members who have been disabled from performing their ordinary duties one week or longer, for a period not to exceed twenty-six consecutive weeks. No allowance, however, shall be made for sickness, unless the same shall be the immediate result of injury. The officers and directors of this mutual benefit association are prominent and faithful employés of this company, and apart from the benefits derived in relieving the distress which injury or death may create, are the manifold advantages of closer bonds of fellowship. This company provides reading rooms and lodging rooms at various points on the road for the accommodation of the trainmen. These are notably at Toledo, Lima, Dayton, Cincinnati, and Indianapolis. The rooms, which are all conveniently situated near enginehouses, are furnished with tables and chairs, writing materials, and the various daily and weekly papers, railroad papers, and railroad magazines. Adjoining them are sleeping accommodations and lavatories.

The Cleveland, Cincinnati, Chicago and Saint Louis railway company has no special insurance or guarantee fund, but the employes themselves, over twenty years ago, organized the Bee Line mutual insurance association, for the benefit of the families of deceased and disabled employes. This association has been successful in its operation, having up to last fall (1888) paid to the beneficiaries a total amount of \$332,143.65. The association is controlled exclusively by the employes of the railroad, the company having no voice except to give its heartiest support and a contribution of \$500 annually toward its expenses. The company supports what is called the Brightwood Home, at Brightwood, near Indianapolis, which is practically an eating and lodging house for trainmen; but it is furnished with all modern improvements, and has a reading room that will accommodate fifty persons. It is

plied with volumes of interesting and profitable reading number of daily papers, magazines, and interesting

re and Hudson canal company has a relief fund in conscoal department, for the purpose of providing for parployés of that department in cases of sickness or death. Example to avail themselves of its benefits. A sum equal to the all payments made by the employés is also paid into the ampany itself. This plan has been in operation over three fravellers' insurance company, of Hartford, Connecticut, to operate over the several lines of the road. The company supports the reading rooms established by the Young ian association, and very many of the men who belong all department of the association have the benefit of libratic.

ware, Lackawanna and Western railroad company has no ation; but the trainmen and shopmen have an organization id. This association provides a fund for death and pays fits for injuries. It has been in operation nine years, and so the radiown is giving perfect satisfaction. This company provides both reading and library rooms for its men at Hoboken, Scranton, Great Bend, and Elmira. These rooms are under the supervision of the Young Men's christian association.

The Denver and Rio Grande railroad company has a hospital fund, to which employés subscribe 50 cents per month, and this entitles them to medical treatment in case of sickness or injury, and a certain allowance to defray burial expenses. The company has a library for the use of employés at the Burnham shops, Denver, Colorado. This library is located in the company's building, and no rental is charged for its use; but employés who desire to use it pay a membership fee of \$2 and an assessment of 50 cents per quarter, all the money collected being expended in the purchase of periodicals and books. This library has an excellent collection of valuable literature.

The Fitchburg railroad relief association and the railroad employés' relief association are two organizations supported by the employés of the Fitchburg railroad, Hoosac Tunnel route, and other companies; but no contributions are made by the roads. The company, however, contributes to the support of the reading rooms of the railroad branch of the Young Men's christian association at Troy and Mechanicsville, New York.

The Flint and Père Marquette railroad company furnishes buildings for reading rooms at several points, which are under the management of the Young Men's christian association. In these rooms there is a good assortment of newspapers and magazines, and several officers of the company contribute toward their expenses.

The non-secret mutual beneficial association was organized by the employés of the Georgia railroad company May 30, 1889, but the road itself has no benefit fund, and provides in no way for insurance. It subscribes to the railroad branch of the Young Men's christian association at Atlanta, and secures to its employés the use of the reading rooms of the association.

The Grand Trunk railway company of Canada has a superannuation and provident fund association, which was organized October 1, 1874, for the benefit of certain classes of the employes of the company. An insurance and provident society was organized July 1, 1884. Prior to 1884 a system of insurance was in force on a limited scale. A similar society was in existence on the Great Western railway (now part of the Grand Trunk system) some years prior to 1884. During the half year ending June 30, 1889, the Grand Trunk railway company contributed to the superannuation and provident fund association \$4,525, and to the insurance and provident society \$6,250. The contribution to the latter society, up to December 31, 1888, was \$10,000 per annum; but in consideration of the number of men admitted by absorption of new lines into the Grand Trunk system, the contribution was increased to \$12,500 from January 1, 1889. These payments are made and the association established under sanction of the parliament of Canada. The company provides free lodging houses at all terminal or locomotive stations for the use of enginemen and firemen who require to take rest away from their homes, and these houses are provided with baths and other necessary conveniences. At large locomotive stations, where there are repairing shops, reading rooms are provided, which the men can use at a nominal expense, and which they themselves manage.

The Illinois Central railroad company has a reading room at East Cairo, which is maintained by the men, but aided by contributions from officers of the company. At some other points on its line the Young Men's christian association has provided reading accommodations for trainmen, but with the aid of the railroad company and its officers.

The Kansas City, Fort Scott and Memphis railroad company has a reading room at Fort Scott and one at Thayer, Missouri. These are provided by the company, and are heated and lighted at its expense. One is also provided at Ash Grove, Missouri, by the employés, and is heated and lighted at their expense. The company, however, contributes reading matter to all of them.

At Kansas City the railroad companies using the union passenger depot provide reading rooms, which are managed under the auspices of the railroad branch of the Young Men's christian association, to which the railroad companies contribute monthly sums to cover the expenses of maintenance.

The Lake Shore and Michigan Southern railway company has no insurance or guarantee fund for the benefit of its employés, but in 1869

an insurance company was organized among its employes, which company has been in operation ever since, with a membership now of 1,100, and it is assisted by the company in the way of an annual gift of \$500. and many officers of the road are members. The railroad branch of the Young Men's christian association has reading and resting rooms at Buffalo, Erie, Collinwood, Cleveland, Detroit, Jackson, and Elkhart, which are appreciated and well patronized by the employés. These rooms are supplied with newspapers, periodicals, books, and reading matter of an interesting and instructive character, and entertainments are frequently given for the benefit of the employés. Each building is in charge of a secretary, whose salary is paid by the railroad company, except at junction points, where other companies contribute jointly to the expense. The Lake Shore expends in this way \$2,500 per annum.

The Lehigh Valley railroad company has an insurance or guarantee fund, or, as it is called by the company, a relief fund, which provides for the employes in case of injury received by them in the discharge of their duties, and provision is also made for payment to the families of employés in case of their death by reason of such injuries. The fund is accumulated by calling upon the employés to contribute a certain sum at a certain time. This contribution is entirely optional, but of course if they do not contribute they fail to receive the benefit of the fund in case of needing it. The company contributes an equal amount, and the relief fund is administered by the company, under the direction of an officer appointed by it, but without expense to the fund. The relief fund has been in operation about twelve years. The feeling in respect to it on the part of the employés is exceedingly favorable, a large number of them being members, and those who are not do not refrain from joining by reason of any want of good feeling toward the plan.

On the Louisville and Nashville railroad company's lines, at several of its terminal stations, there are established reading, bath, and amusement rooms, convenient to the company's premises, under the management of the railroad branch of the Young Men's christian association, to which the company makes liberal subscriptions.

The Maine Central railroad company does not directly provide an insurance or guarantee fund for its employés. There is, however, connected with it a relief association, managed by its employés, which has the full approval of the company, as well as its material assistance.

The Michigan Central railroad company makes monthly contributions to the reading rooms for employés at several stations on its lines, these reading rooms being generally managed by the railroad branch of the Young Men's christian association.

The Missouri, Kansas and Texas railway company has a hospital fund, which is accumulated by monthly assessments upon all employés, the rates being: upon those receiving less than \$50 per month, 25 cents; over \$50, 50 cents per month. This entitles the employé to office treatment and medicine at the various points on the line where local surgeons are employed; it also entitles him to entrance into the hospital at Sedalia, Missouri, upon recommendation from the head of a department.

The Missouri Pacific railway company has a hospital department. conducted upon the plan of graded assessments, based upon the amount of wages received by each employé; thus, an individual receiving less than \$50 per month pays 25 cents per month, and an individual receiving \$50 per month or over pays 50 cents per month. This constitutes a fund out of which employes receive medical and surgical treatment. and enables every employé to receive at the least possible cost the best treatment. The company has two hospitals, one at Saint Louis. best one at Kansas City, with emergency stations at Little Rock, Van Buren, and Pueblo. The company has department staffs, which embody every main element of specialties—eye, ear, throat, lungs—consisting of men of established reputation, who are continually in the service of the hospital department. The company supplies transportation to and from the hospitals, also to various parts of the country, when necessary for the better treatment of employés. Burial expenses are paid in cases of death arising from injury or sickness. The hospital is extensively used by the employes, more than nine-tenths of all the employes of the company receiving treatment annually. In the way of reading rooms the wants of the road are supplied by the railroad branch of the Young Men's christian association, to which the company gives a monthly subscription of money at several points, rent-free rooms, etc.

The Newport News and Mississippi Valley company (western division) maintains a hospital at Paducah, Kentucky, which is open at all times to all employés who may be in need of medical attention. The expenses of this hospital are met out of a fund created by contribution from the company and an assessment of each employé, the assessments being made on the graded plan. The funds are expended only in administering the affairs of the hospital, under the direction of the chief surgeon and the control of the board of directors, who manage its affairs. This plan is very favorably received by the employés. The company makes contributions to support the reading rooms of the Young Men's christian association, and on the eastern division a reading room is equipped and maintained at the company's expense at Lexington, Kentucky.

The New York Central and Hudson River railroad company contributes very largely for the support of buildings and reading rooms, which are cared for under the auspices of the railroad branch of the Young Men's christian association. The company has buildings for this purpose exclusively in New York city, New Durham, New Jersey, Troy, Albany, West Albany, De Witt, and East Buffalo. The company also maintains rooms, fitted up for lodging, reading, baths, etc., at Thirty-third street and Seventy-second street, New York city, and at Little Falls, Syracuse, Rochester, and Buffalo. At all these rooms the ex-

penses are largely paid by the company, and it has provided the rooms or buildings either in whole or in part.

The Northern Pacific railroad company has an organized relief system, known as the Northern Pacific beneficial association, of which the general manager is president. This provides a regular system of medical attendance, applying alike to both sickness and injury, also a daily allowance of 50 cents during the time of actual disability, and a small death allowance to cover burial expenses in case of death. The fund is maintained by a monthly assessment of all employes on a 50-cent per capita basis, the fund thus raised being held by the assistant treasurer of the railway company, and administered by the secretary of the association under the direction of the president in connection with an executive committee from the general officers of the company. medical work is divided into two divisions, east and west of Helena, with a hospital at Brainerd, Minnesota, for the eastern division, and another at Missoula, Montana, for the western division, with a chief surgeon for each division, who is resident at the hospital. There are also local surgeons under contract at all terminal and prominent stations. The association commenced its operations in October, 1882. The service is generally acceptable to employés. The hospital service is good, and the grounds are kept neat and attractive. Those who have been attended at these institutions speak well of them and the treatment received. The company also encourages the establishment of reading rooms by granting sites for buildings along its right of way and by gifts toward the same.

The Pennsylvania railroad company has a relief fund, formed chiefly of regular monthly contributions by employés who become members thereof, to which is added any income or profits from investments, appropriations by the company, and gifts or legacies which may be made for the use of the fund. No employé is required to become a member of this fund, membership being entirely voluntary, and any member can withdraw without affecting his standing in the service. Any employé not over forty-five years of age, who has been in the service for one month, and who passes a satisfactory medical examination, may become a member in the class determined by his pay, and may also take additional death benefits equal in amount to the death benefit of the class in which he becomes a member. Under certain conditions prescribed in the regulations members may enter higher classes than those determined by their pay. Employés desiring to become members execute a formal application for membership, and upon the approval of the application a certificate of membership is furnished. The fund is administered through a department of the service of each of the six companies associated in the administration thereof, viz: the Pennsylvania railroad company, the Northern Central railway company, the West Jersey railroad company, the Philadelphia, Wilmington and Baltimore railroad company, the Camden and Atlantic railroad company, and the Baltimore and Potomac railroad company. By agreement between the several companies, these departments are managed jointly, under the title of the Pennsylvania railroad volunteer relief department. The department is under the general supervision of an advisory committee, whose duties are to see that its operations are conducted in accordance with the regulations, arrange for investments of money not required to be kept on hand for current use, determine the use that shall be made of any surplus at the end of any period of three years, appoint persons to audit the expenditures each year, propose such amendments to or changes in the regulations as it may deem desirable, and act upon questions brought before it by appeal from decisions of the superintendent or otherwise respecting the rights and claims of members. This advisory committee consists of the general manager, as member ex officio and chairman, and twelve members, chosen annually, six by the directors of the companies and six by the members of the relief Members are entitled to definite amounts, proportioned to their contributions, in case of disablement from accident or sickness, and in the event of death certain definite amounts are payable to their relatives or designated beneficiaries. Members disabled by accident are also provided with free surgical attendance. In order that the contributions to the fund may be devoted entirely to the payment of benefits, the companies defray all the expenses of administration. They also guarantee to make good any deficiency which may exist in the fund at the end of every period of three years. Should there be a surplus at the end of any such period, it is to be used in the promotion of a fund for the benefit of superannuated members, or in some other manner for the sole benefit of members, as shall be determined by a vote of twothirds of the advisory committee and approved by the board of directors. The relief fund was established February 15, 1886, and was the outgrowth of a desire upon the part of the companies associated in the administration of the department to advance the interests of their employés and provide them with specific relief for themselves and families in case of accident, sickness, and death. That the fund is regarded with great favor by the employes is evidenced by the large and constantly increasing membership. There being no provision in the regulations of the relief department for continuing payment on account of sickness after payments have been made for fifty-two weeks, the board of directors authorized, at the expense of the companies, the continuation of payments equal in amount to one-half the sick-benefit rate received during the fifty-two weeks, until investigation and report on the merits of each case could be made, and of such payments thereafter as might be authorized by the boards. The company has commodious reading rooms at various points, supplied with current daily and weekly periodicals. Mr. Charles E. Pugh, the general manager, in his testimony before the Interstate Commerce Commission, says:

Our experience with these reading rooms and adjuncts * * has been very satisfactory, indeed; we find they are largely frequented by

the trainmen, and we believe they prove a strong inducement to attract them from frequenting drinking saloons and other places of doubt ful surroundings. These establishments are in charge of old employés, who in many instances are unfit for service, but well known to the trainmen, whose duty it is to see that order and proper discipline are preserved.

The Philadelphia and Reading railroad company provides an insurance or guarantee fund for the payment to its employés of benefits in the case of sickness or accident, and to the families of employés in the case of death. It is known as the Philadelphia and Reading railroad relief association, and embraces not only the employés of this company but those of its affiliated, leased, and controlled lines. Its organization was effected October 30, 1888, at a meeting held in the city of Reading. composed of a number of delegates averaging three from each division or department of the company's service. The fund which responds to the claims is accumulated by contributions made monthly by the members of the association, together with a contribution by the company made at the same time, and equal in amount to 10 per cent. of the total contributions of the employés. The company guarantees to make this contribution regularly from time to time until the aggregate contributions have amounted to \$1,000,000, and thereafter to make a contribution of 5 per cent, upon the same basis, and also guarantees to make good any deficit in the fund up to \$1,000. It also assumes all expenses incident to the conduct of the relief association, such as salaries, clerk hire, office room, and stationery, in addition to its regular contribution, leaving the fund accumulated to meet simply calls for benefits. The relief association is managed by an advisory committee, composed of nine members, five of whom are chosen by the employés and three by the board of managers of the railroad company, the ninth being the general manager of the railroad company, who, ex officio, is chairman of the advisory committee. Elections for members of this board are required to be held annually. The details of the management are under the direction of Mr. John W. Royer, superintendent of the relief association, who makes all settlements of claims. His vouchers are countersigned by the chairman of the committee and paid by the treasurer of the relief association. The moneys of the association are deposited separately to the credit of the association. There are visiting committees in each division or department, who from time to time call upon the sick in their respective districts and make reports to the superintendent upon their condition.

At the establishment of the association the membership was about two hundred. Of the total number of employés about fourteen thousand are eligible for admission to the association, and the total membership at this time is 95 per cent. of all eligible employés. The objects of this association were twofold. It was designed in the first place to bring the interests of the employer and the employed into closer connection, and in the second place to relieve the employés from the burden of

many calls made upon them by reason of sickness, accident, and death among themselves. Before its establishment there was hardly a case of sickness, accident, or death where the fellow-members of the division or department in which the case occurred were not called upon, or at least expected, to make a contribution. The necessity for this no longer exists, and the monthly contribution made by each member not only relieves him of this great drain upon his resources, but provides a fund from which the unfortunate member receives his benefits. Mr. McLeod, the vice-president and general manager of the road, states:

We have every reason to believe that the employés appreciate the great advantages to them of this association, and the presentation of the fact that 95 per cent. or 13,337 of them are members is perhaps the best evidence of their feeling in this connection.

The Pittsburgh, Cincinnati and Saint Louis railway company organized in July, 1889, what is known as the voluntary relief department of the Pennsylvania lines west of Pittsburgh. It has about 3,500 members, and the officers testify that there is every reason to believe that the organization will in the very near future reach a membership of 10,000. The company was led to establish the system, first, from its desire to give its employés a means of insuring themselves in an organization whose benefits were adapted to their calling, and of which the financial integrity was guaranteed; and second, because the success of a similar organization on the Pennsylvania lines east of Pittsburgh had been so marked as to cause numerous requests from the employés of the western lines for the bestowal of similar privileges. association is, as its name indicates, entirely voluntary, and, as the number of applications for membership received during the first two months of its existence shows, is receiving very satisfactory support. This line has established and maintains reading rooms at its own expense, and also contributes to the expenses of the Young Men's christian association railroad reading rooms, to which employés have access.

The Rio Grande Western railroad company has accumulated a hospital fund by assessing every employé 50 cents per month. This hospital fund is administered under the direction of the chief surgeon. It is said that the employés, as a rule, are well satisfied with the way the fund is managed.

The officers and employés of the Savannah, Florida and Western railway company have formed among themselves an association for the relief of its members in case of sickness or accident, and to provide a death benefit to defray funeral expenses. The association numbers 530 members. It has enlarged its scope of usefulness by the formation from its members of the mutual cooperative association, duly chartered by the state of Florida, the object of which is to buy goods and sell the same for the benefit of the members.

The Southern Pacific company, while having no insurance or guarantee fund, or any association for the benefit of employés, has a com-

plete hospital and medical-benefit service, under the charge of a superintendent. A hospital is maintained at Sacramento, California, and contracts with well-conducted hospitals (often those under the management of the Roman Catholic sisterhood) are in force for the care of sick and injured employés at other places, viz: San Francisco, Oakland, and Los Angeles, California; Tucson, Arizona; and Portland, Oregon. Physicians and surgeons are under engagement to care for sick and injured employés at the expense of the hospital fund at various points on the line, and, wherever practicable, specialists (notably oculists and aurists) are also under engagement. This list of medical attachés foots up fifty names. In cases of sickness or injury employés are entitled to treatment, free of charge, at the nearest company physician's or surgeon's office, and, in cases of necessity, at their homes. By arrangement with druggists medicines are at many points furnished to employés without charge on prescriptions made by the company physician. This company provides at many places, especially in Nevada, Utah, Arizona, and New Mexico, neat lodging houses, with bath rooms, and employes not otherwise provided for are entitled to occupy these houses free of charge. Reading rooms are also provided by the company at division stations, the libraries therein being usually maintained by special contributions from employés. Some of these libraries are large and well selected, and all are in every way creditably conducted.

The Texas and Pacific railroad company has a hospital, under the supervision of a skilled physician and surgeon. This hospital is maintained by a certain amount contributed monthly by the employés—all employés receiving \$100 or less, contributing the sum of 25 cents; those receiving more than \$100 per month, contributing 50 cents per month.

The Union Pacific railway company has what is known as a hospital fund, which originated in 1881 by voluntary contribution of employes of the Smoky Hill and Denver districts of the Kansas division, the amount paid by each employe being 50 cents per month. In 1882 this was made uniform over the entire system of the road, and continued until February I, 1884, when the assessment was reduced to 40 cents per month. In December, 1884, it was still further reduced to 25 cents per month, and this rate has continued since. On account of additional benefits, which have from time to time crept into the system, it was finally decided to restore the former assessment of 40 cents after November 1, 1889. This company owns a hospital at Denver, leases a building for hospital purposes at Ogden, and has contracts with hospitals at Omaha, Kansas City, and one or two other points on the line, where patients are cared for at a stipulated price per day or week. The company has also established reading rooms at several points.

The Utah Central railway employés' mutual aid society is an organization formed by the employés of the Utah Central, and has been in existence about sixteen years, being very successfully managed, and having given excellent satisfaction to its members. It is unlike most

benefit societies in being confined to actual employés, so that when a person leaves the service of the company he also leaves the society, but is allowed to draw any surplus profits which may stand to his credit on the books. The relief is limited in duration to six months' full pay, and three months' half pay continuously, after which time the member has no further claim on the society. In case of frequent sickness no member is entitled to receive more than six months' full pay and three months' half pay within a period of fifteen months. The payments to the society are classified respectively A, B, and C, the payments being \$1.50, \$1, and 50 cents per month. In case of sickness, the relief is: for class A, \$56 per month; class B, \$37; and class C, \$19. In cases of death: for class A, \$225; class B, \$150; class C, \$75. The society was established by the employés themselves, and is regarded as a very beneficial institution. The secretary is paid about \$180 per year for attending to the business of the society. Each member is credited the amount of his contributions, and is charged his proportion of current expenses, including sickness and death. Any balance remaining in his favor is paid to him in full on leaving the company's service, and at the end of each year a dividend is declared proportionate to the amount to the credit of each member. A balance of \$2,000 is reserved at the beginning of each year as a fund in addition to the current contributions. This has been found ample in all ordinary cases of sickness and death.

The Wabash railroad company has established a hospital system, under the rules of which employés receiving \$50 per month and over contribute 50 cents per month from their wages, and those receiving less than \$50 contribute 35 cents per month. This contribution entitles them to treatment in the hospitals of the company in case of sickness or injury, or to such prescriptions as they may wish when they are not ill enough to be removed to the hospital for treatment. The company also contributes a certain amount per month (according to the size of the place and the number of employés located there) to the support of reading and recreation rooms, under the supervision of the Young Men's christian association, at nearly all of the large terminal points. It has also been the policy of the company to encourage by money subscriptions and otherwise the formation of literary and educational societies at points along its line where any number of employés congregate during their leisure hours.

The foregoing statements are practically briefs from quite full statements made to the Interstate Commerce Commission by the officers of the roads named. The several statements will be found in the Third Annual Report of the Commission, that for 1889, in appendix II. Nearly all the roads in the country of any size provide in some way and to some extent for the treatment of employés who are injured in the service. If there are no hospital funds or hospital systems established, then individual cases receive specific or particular attention, according to the conditions.

From information furnished to the Department it is learned that a fair share of the roads assist their employés in securing life or accident insurance policies. A few insist that employés shall secure such policies; but less than a score assist their employés in the payment of the premiums for such policies.

Six companies testify that they pension their superannuated employés, and also their permanently disabled people. A few give superannuated employés light work, or allow half-time pay; while a goodly number make settlements upon the permanently disabled, or they assist them in the way of passes or gratuities, and a few by half pay. The large number of two hundred and sixty-six companies retain in their service permanently disabled employés, the number of such on the rolls at the close of 1888 being 3,121.

A very large number of roads also provide some system of technical education for the men in their shops, and some have regular apprenticeships. A few roads have technical and other schools for the benefit of employés, and in some cases of their families.

It must not be supposed that the only roads supporting or contributing to the support of reading rooms are those which have been named. Through the efforts of the railroad branch of the Young Men's christian association very many libraries and reading rooms have been established on other lines.

I have been content to use the statements made to the Interstate Commerce Commission because it did not seem wise to make duplicate inquiries of the roads. Such inquiries would simply have called out duplicate answers, and a sufficient amount of information was contributed to enable this Department to secure what is desired.

The Commission also asked the chief officers of the great labor organizations that deal with railroad matters to give their views in regard to insurance funds, beneficiary associations, technical schools, etc., and their statements are reproduced in full.

CHIEF ARTHUR AND THE ENGINEERS.

Mr. P. M. Arthur, grand chief engineer of the International Brotherhood of Locomotive Engineers, replied substantially as follows:

The Brotherhood of Locomotive Engineers established an insurance association in December, 1867. It is optional with the members of the brotherhood to take out policies. Certificates of membership are issued to the amount of \$4,500, and it is discretionary with the members whether they take out one, two, or three policies, each one calling for \$1,500. In the event of death, pay is according to the number of policies held, and the same amount is paid for the loss of a hand, foot, or limb, or total loss of eyesight. We have paid through this channel to widows and orphans of disabled members of the association \$2,500,000. Many of our subdivisions have also established so-called weekly-benefit societies, which pay to the members from \$10 to \$12 a week at a cost of 50 cents a month to each member. We have also in use by divisions a form of charity blank for a member who has been sick, out

of employment, or in need. It is filled out and sent to the convention by the delegate of the division. Such claim is there examined and the amount determined. We distribute each year from \$10,000 to \$12,000. This money is received from the profit on our journal and other miscellaneous matter furnished the subdivisions. We had paid in this way about \$500,000. The relief fund now being introduced by the railway companies was unknown at the time we established our plan of insurance. No man can become a member of the brotherhood unless he is twenty-one years of age, has had one year's experience as a locomotive engineer, is of good moral character and temperate habits, and can read and write. As a rule engineers are promoted from firemen and conductors from brakemen. Length of service before promotion depends to a great extent upon the character of the man. Some of the roads are requiring examinations for promotion, but this was not so when I was in active service as locomotive engineer fifteen years ago. It is customary on all roads where merit and ability are equal to give the oldest in the service the preference of engines and trains. a fireman is first promoted, as a rule he is placed on a switching train, then a construction train, a freight train, and a passenger train. The length of time he serves on each depends generally upon demand for road engineers and the ability of the man himself. On a majority of the roads promotions are made from the ranks of the employes, though there may be instances where men are brought from the outside to fill positions of authority.

Concerning the troubles arising over beneficiary organizations, Baltimore and Ohio troubles, and the recent attack of the Reading on the brotherhoods, Mr. Arthur says:

It is a mistaken policy on their part. They may feel aggrieved at the action of some of the members of these organizations, but they should not condemn all for the misdeeds of a few. Even if they succeed in preventing the men from joining for a time, sooner or later they will identify themselves with some one of the labor organizations. The same trouble occurred in the early days of the brotherhood with the Grand Trunk road and the Chicago and Northwestern, and from these examples it is seen that when men are dismissed for joining labor organizations it results simply in their meeting secretly in out-of-the-way places until they become thoroughly organized, when the dismissal of one means the discharge of all. It is in the interest of railway companies to aid and assist their employes to combine together for mutual benefit and protection. The brotherhood has been instrumental in giving the railway companies a better class of men than they would otherwise have had. Their laws are very rigid as to drinking, they having expelled during the last year three hundred and seventy-five members for intoxication; and whenever a man is detected dissipating he is punished and the officers of the road are notified of the same.

MR. WHEATON AND THE CONDUCTORS.

Mr. C. S. Wheaton, grand chief conductor of the Order of Railway Conductors of America, replied as follows:

There is an insurance fund connected with our organization. It is on the assessment plan, and from it members derive a benefit in the amount of \$2,500 in case of total disability, or their heirs the same amount in case of death. The fund was established in 1882, and since

that time there has been paid from the treasury of the fund over \$500,000. It is raised on the mutual benefit plan of \$1 an assessment on each member when a claim is approved, and any balance over the claim is kept till the sum of such balances over paid claims shall equal a claim, when no assessment is made. No railroad company contributes to its support. Many of our divisions have in their own by-laws provisions for the payment of sick benefits per week in case of sickness. Our order does not interfere in any way with the established rules of railway companies in the employment or promotion of conductors. employé is not eligible to membership in the order until he has been found competent to take charge of a train as conductor and as such has been in the employ of the company for two years, and unless his moral character is sufficiently established to permit membership. do not recognize grades in our order, as all men stand alike, whether they have run trains two or six years or whether employed as freight or passenger conductors. If a man is unfortunate and loses his position it does not change his position in the order. In short, we do not believe we have the right to interfere with the officers of the company in the handling of their men, or dictate to them whom they shall employ. However, if injustice is done to our men, we frequently intercede for them to secure justice for all.

MR. O'SHEA AND THE BRAKEMEN.

Mr. Edward F. O'Shea, grand secretary and treasurer of the Brotherhood of Railroad Brakemen, replied in substance as follows:

The grand lodge of the Brotherhood of Railroad Brakemen has a beneficiary fund in which all members participate. This fund is maintained by assessments, and in cases either of total disability or death the beneficiary or person named in the beneficiary certificate receives \$1,000. The fund was established in 1884, and up to date we have expended \$528,097.70, and at the present time we are paying one claim of \$1,000 per day. Our brotherhood also pays benefits to the sick and distressed, but each subordinate lodge takes care of its own cases and raises its funds by monthly dues. Many thousand dollars are expended each year. Our brotherhood has no rules of apprenticeship, but we believe that, other things being equal, the oldest brakeman should receive preference when promotion is to be made. This is not always done, as sometimes men are brought from the outside and get positions as conductors. This is one of the causes of dissatisfaction in the service. We have thousands of conductors in our brotherhood (promoted from brakemen since becoming members) who retain membership with us from choice, but they are all on equal footing in every respect with our other members. With few exceptions, our brotherhood has had no differences with railroad companies, but, on the contrary, is recognized by most of the managers as a positive benefit to their employés, and consequently to the service of their road. Some of the principal lines have lately organized so-called relief associations for the ostensible purpose of "caring for our dear employés," but the real purpose is to undermine and ultimately to destroy the brotherhood and place the men entirely at the mercy of the corporations. The brakeman does not receive wages commensurate with the work he performs or the dangers he is compelled to undergo; hence he is unable to keep up his membership in more than one organization, and as a portion of his wages is retained each month for his membership in the relief fund, he has no

choice in the matter. A protest will result in discharge, and a discharge forfeits all moneys paid into the fund. The relief fund is a delusion and a snare, and many of the brakemen know it from bitter experience.

MR. SARGENT AND THE FIREMEN.

Mr. F. P. Sargent, grand master, replied for the grand lodge of the Brotherhood of Locomotive Firemen, as follows:

The Brotherhood of Locomotive Firemen was first instituted in 1873 as a benevolent insurance association. The system of paying benefits was this: A certificate of membership was issued to each member, under seal of the association, and such certificate of membership constituted a life insurance policy. The certificate stated for whose benefit the insurance was made. It also stated the agreement on the part of the association to pay to the party or parties as above, or to the legal heirs or representatives of the same, the sum of 50 cents from each and every member of the association in good standing at the time of the death of the insured, providing the number of members should not exceed 2,000. On the death of a member proof is made by the proper officials, and the claim is laid before the finance committee, and, if approved, an order on the sinking fund is drawn for a sum equal to 50 cents a member (in good standing), provided the number of members does not exceed 2,000; but if the number does exceed 2,000, an order for \$1,000, the maximum policy, is drawn. There is a disability department, also, under the same rules and same officers, but with a separate sinking and expense Each member can join either or both. Each has a separate entrance fee and separate certificate of membership. The accounts are kept separately, and each bears its proportion of the general expense of the association pro rata, according to the number of members. system was changed in 1881, and became a compulsory feature of the order. The amount of insurance in each case was made \$1,000. assessment remained the same, i. c., 50 cents. Any member refusing to pay an assessment is suspended until such arrearage is paid. are issued not exceeding three per month, and the several surpluses over \$1,000 on each claim are preserved until such surplus has reached \$1,000, with which a claim is paid without assessment. Total disability is treated the same as a death claim, as is also the loss of an arm or leg or eyesight. This system remains in effect at present save that the policy was increased to \$1,500 in 1884. It has been the principal feature of the order and one of the cheapest insurances offered to locomotive enginemen. From the organization of the order till February 1, 1889, there was paid on death and disability claims \$1,352,000. The membership is now 18,000, every one carrying a policy of \$1,500 payable in case of death, total disability, or loss of eyesight, hand, or foot. disburse monthly \$25,000 in benefits. The order realizes the necessity of discipline, believes in railway companies recognizing merit, and asks to have the oldest firemen in service promoted when they are competent and worthy, and opportunity offers. We have no fixed time for a fireman to serve before promotion, leaving it to the judgment of the master mechanic under whom he may be, but we desire when a company wants engineers, that the firemen be promoted, the oldest in service being examined, and, if found competent, advanced. This will be an incentive to the firemen to be diligent and competent. Another desire of the order is to obtain employment for good firemen who through accident or neglect of duty have lost situations, yet whose accident or neglect would not debar them from following the occupation on another road. We do not insist upon this, but hope to introduce it, believing that experienced men are preferable to those taken from the farm or shop. The relationship existing between the companies and members of our order is wholly harmonious.

MR. SIMSROTT AND THE SWITCHMEN.

Mr. William A. Simsrott, grand secretary and treasurer of the Switchmen's Mutual Aid association of North America, wrote thus:

We have a guarantee fund which is governed by the local lodges, and only pay benefits in cases of accident, sickness not included. In case of death or total disability we pay \$900. This regulation was established in March, 1886. The fund is raised yearly at our annual convention and accumulates by a pro rata assessment on each member of the association. As to our rules of apprenticeship, it is necessary for any man desiring to join our association to have followed this vocation for one year; but we do not insist upon apprenticeship.

TWO OTHER OPINIONS.

Mr. Harry J. Gray, secretary of Employes' Mutual Aid society, Saint Paul, Minneapolis and Manitoba railroad, writes at the request of Mr. George Buck, locomotive engineer:

We organized our mutual aid society in December last and the benefits began January 1. We are satisfied with our success and feel assured of improvement. The number of members in good standing is 305.

Mr. E. R. Bristol, of the Railway Employés' club, Chicago, Milwaukee and Saint Paul railway, who incloses a pamphlet containing constitution and articles of confederation, writes as follows:

The beneficial department we have just started, with excellent prospects for the future; such changes as experience suggests will be made from time to time. Our club proper we started a year ago, being compelled to do so by hostile legislation. We then had a membership of 13,000.

ACCIDENTS.

The following statement regarding accidents is also taken from the Third Annual Report of the Interstate Commerce Commission:

Personally concerned as every man is in the safety of travel the subject of railroad accidents has always had the greatest popular interest. That the facts are quite sufficient to warrant this interest may be seen from the following figures taken from the annual reports of the railroads of the country to the Commission for the year ending June 30, 1888. There were reported for that year deaths and injuries to persons as follows:

Passengers killed	315 2, 135
Employés killed	2,070 20,148
Other persons killed	2,897 3,602
Total persons killed	5, 282 25, 888

But the reports do not cover the total mileage of the country; only 92.792 per cent. of it. If the accident rate was the same on the roads not reporting, the total number killed was 5,693 and the total injured 27,898. These are the returns made by the railroad companies themselves, and they cannot well be suspected of exaggeration. Neither is there, on the other hand, any reason to suppose that they are not, in most cases, complete and prepared with perfect good faith.

A thought strikingly suggested by these figures is that accidents to passengers take up an undue proportion of the public attention. Not only are casualties to employés several times more numerous, but they are concentrated upon a comparatively small class, each individual of which undergoes considerable hazard. Some estimate of how great this hazard is in the case of one class of employes may be made from the records of the Brotherhood of Railroad Brakemen, an organization that has for one of its objects the insurance of its members against death or total disability. During the year 1888 the average membership of this brotherhood was 10,052.5. Insurance has been paid upon 114 deaths and 53 total disabilities, the result of injuries received from railroad cars during that year. In the same time there were only 31 deaths and 6 total disabilities from natural causes. These data are taken from the printed assessment notices of the order. Thus one in every 88 of the members of this organization is killed yearly, and one in 60 suffers either death or total disability. It appears, also, that a brakeman has only 31 chances in 145, or 1 in 4.7, of being allowed to die a natural death. Exception may perhaps be taken to this conclusion on the ground that brakemen are mostly young and vigorous men not likely to die from natural causes, but surely this view of the case is not more satisfactory than the other. No record is kept showing the number of lesser injuries received, but if the ratio of killed to wounded is taken as the same as that which, according to the figures quoted above, holds good in accidents to railroad employes over the country at large, namely, 1 to 9.73, the number of those receiving injuries serious enough to be reported to the Commission would be, exclusive of the killed, 1,109, or 1 in 9 of the members of the order. It would appear from this result that, besides running great danger of death, a brakeman will, on the average, be injured once for every nine years of service. It should be said that this brotherhood includes quite a number of conductors and others whose occupation is less dangerous than that of brakemen, so that the hazard to brakemen is presumably somewhat greater than here shown. It is probable that no occupation followed in this country by any large class surpasses in danger that of the railway brakemen.

EMPLOYERS' LIABILITY FOR PERSONAL INJURIES TO THEIR EMPLOYES.

From the foregoing statement of facts as to accidents, the great risk to individual life taken when entering upon the railroad service is clearly brought out. Many attempts have been made to reduce this risk. The welfare of the public is at stake in the matter, as well as the physical well-being of the employés themselves. It is probably true that the restrictions upon the use of intoxicants, the increased intelligence brought about by the action of companies and of labor organizations by which a railway esprit de corps has been stimulated,

have reduced the proportion of accidents to a considerable extent. The construction of roads, the appliances for safety purposes, the use of steel rails, the improvements in couplers-all such means which can be adopted by the corporations tend greatly to a decrease in the list of casualties, both to passengers and to employés. This is a subject in which the public is vitally interested. Safety in travel not only increases the comfort of the public, but increases the profits of the companies themselves, and certainly adds much to the well-being of the employés; so every consideration requires that all means, both under law and under mechanics, should be adopted which may tend in any legitimate line and to any appreciable extent to the diminution of railway casualties.

It is probably true that the establishment of insurance funds, to which employes themselves largely contribute, will, in the long run, if it has not already done so, help much to secure a diminution of casualties, and it cannot be doubted for a moment that the employment of sober, intelligent men, men whose heads are free to comprehend the difficulties as they arise in railway service, and whose intellects are alert, is a powerful agent in the reduction of casualties.

It is now thought by many that law can aid in increasing the safety of the public and in preventing accidents to employes by shifting the responsibilities for injuries, under the common-law rule, from the shoulders of the employés to the shoulders of corporations, and, without attempting to enter into the whole legal discussion which envelops this subject of liability of employers and employes, it may be well to briefly state to what extent each factor in the railway service is responsible (a). Under the common law as it exists in England and America and in the greater part of the continent of Europe, where the Roman law is the precedent, it is the rule that the principal is responsible for the acts of the agent, the same as if he performed the acts himself. Of course there are some modifications of this rule under special circumstances, but these need not be discussed. The general rule is as stated. not even inquire into the justice of the rule, for it must be accepted as the principle under which a person injured or aggrieved by the agent of another has his remedy against the principal, or, as the language of the law puts it, a person injured by the servant can recover of the master. Curiously enough, this rule does not apply, generally and in broad terms, where the person injured by the agent or employé of another is also an agent or employé of the same principal; that is, in

a The legal status of this question has been quite elaborately discussed in the Fourteenth Annual Report of the Massachusetts Bureau of Statistics of Labor for 1883; in the Eleventh Annual Report of the Bureau of Statistics of Labor and Industries of New Jersey, for 1888; and also by W. Irving Taylor, A. M., LL. B., in a work entitled "Employers' liability to their workmen for accidents incurred in the course of their employment and state regulation of dangerous industries:" Vanden Houten & Co., New York. These constitute nearly if not all the American bibliography of this subject.

simple terms, if A is the proprietor of a factory, a works, or a railroad, and B and C are employes of A, and B is injured through the carelessness or negligence of C, he cannot recover of the proprietor A, because B and C are co-employés, and what is known in the courts under the common law as co-employment would be set up by A as a defence against any claim which B might make for damages resulting from the injuries received through the negligence of C. This doctrine, too, is subject to modifications, restrictions, etc., which need not be discussed, the broad principle being as stated. Of course if it could be proved by B, who was injured through the carelessness or negligence of C, that the carelessness or negligence was really that of the proprietor A, then he could recover, but not otherwise. It is usually assumed, under the common-law rule, that the employé engages in the service of a company or of an individual employer with a full knowledge of all the risks, dangers, and responsibilities of the peculiar employment, and therefore assumes those risks, responsibilities, and liabilities under any dangers which exist; but such risks which the employé takes, are considered only the ordinary risks. The rule does not apply where the risk is not of such a nature as to be reasonably known and assumed, nor does it apply under circumstances where the risk is known to the employer but not to the employé, nor where the employer is under a positive duty and the injury results from neglect of that positive duty, nor, as already remarked, when the injury is incurred through the negligence of the employer himself, except, in the latter case, where the employé may have contributed to the negligence.

The whole subject is an exceedingly interesting one, and offers many opportunities for fine legal distinctions and the application of what might be called the philosophy of law. The whole matter is so fully discussed in the works cited that space is not taken here to reproduce the various phases of the subject. The reader must bear in mind, therefore, that while the rules of the common law are as have been broadly stated, there are many modifications and restrictions of them. which interests us just here is that which prevents the employé from recovery as against the employer when the employé is injured through the negligence or carelessness of a co-employé. This latter rule is a growth of recent years, and is what is ordinarily denominated "judgemade law;" that is, it is the result of rulings of courts in various places, and not of statutory provision. It has a good deal of reason in it, under certain restricted circumstances, but when broadly applied it appears to many to be so inconsistent that legislatures are beginning to restrict the common-law rule by positive statutes. A man under former systems of industry, before the great factory system and that of the congregation of labor generally came into vogue, in working alongside of his fellow-employé, and all the employés working with the employer himself, might not reasonably claim damages for any injury received during the co-employment; but it seems unjust to apply this rule when

a brakeman, on a line, it may be hundreds of miles in length, by the negligence of a switchman whom the brakeman never saw, whose character he did not know when he entered the service, and to whose negligence the brakeman could not possibly have contributed, receives serious personal injury. The brakeman cannot, under the rule, recover damages from the railroad corporation because the brakeman and the switchman are considered co-employes of the same principal. So in a factory, the attendant of a loom may be quietly and industriously attending to her business as a weaver, and through the negligence or carelessness or drunkenness of one who attends the engine in the enginehouse a thousand feet away, loses an arm; under these circumstances the weaver cannot recover damages from the proprietor or owners of the factory. These illustrations show how thoroughly absurd the common-law rule appears to many men under some circumstances. In order to remedy the difficulty recourse has been had to statutory provisions, by which the common-law rule is abrogated or its application limited. The first attempt at such limitation was by the parliament of Great Britain. After long agitation, investigations by parliamentary committees, and discussions in parliament, a law in great measure abrogating the common-law rule was enacted in 1880; this act is herewith printed in full:

EMPLOYERS' LIABILITY ACT, 1880.

[(43 & 44 Vic. c. 42) 7th Sept., 1880.]

AN ACT to extend and regulate the liability of employers to make compensation for personal injuries suffered by workmen in their service.

Be it enacted by the queen's most excellent majesty, by and with the advice and consent of the lords spiritual and temporal, and commons, in this present parliament assembled, and by the authority of the same, as follows:

SECTION I. Where, after the commencement of this act, personal in-

jury is caused to a workman-

(1) By reason of any defect in the condition of ways, works, machinery, or plant, connected with or used in the business of the employer; or

(2) By reason of the negligence of any person in the service of the employer, who has any superintendence intrusted to him, whilst in the

exercise of such superintendence; or

(3) By reason of the negligence of any person in the service of the employer, to whose orders or directions the workman, at the time of the injury, was bound to conform, and did conform, where such injury resulted from his having so conformed; or

(4) By reason of the act or omission of any person in the service of the employer, done or made in obedience to the rules or by laws of the employer, or in obedience to particular instructions given by any person delegated with the authority of the employer in that behalf; or

(5) By reason of the negligence of any person in the service of the employer who has the charge or control of any signal, points, locomo-

tive engine, or train upon a railway—

The workman, or, in case the injury results in death, the legal personal representatives of the workman, and any persons entitled in case of death, shall have the same right of compensation and remedies against the employer as if the workman had not been a workman of nor in the service of the employer, nor engaged in his work.

SEC. II. A workman shall not be entitled, under this act, to any right of compensation or remedy against the employer in any of the following

cases, that is to say:

(1) Under sub-section 1 of section I, unless the defect therein mentioned arose from, or had not been discovered or remedied, owing to the negligence of the employer, or of some person in the service of the employer, and intrusted by him with the duty of seeing that the ways,

works, machinery, or plant were in proper condition.

(2) Under sub-section 4 of section I, unless the injury resulted from some impropriety or defect in the rules, by-laws, or instructions therein mentioned; provided that where a rule or by-law has been approved or has been accepted as a proper rule or by-law by one of her majesty's principal secretaries of state, or by the board of trade, or any other department of the government, under or by virtue of any act of parliament, it shall not be deemed, for the purpose of this act, to be an improper or defective rule or by-law.

(3) In any case where the workman knew of the defect or negligence which caused his injury, and failed within a reasonable time to give, or cause to be given, information thereof to the employer, or some person superior to himself, unless he was aware that the employer or such

superior already knew of the said defect or negligence.

SEC. III. The amount of compensation recoverable under this act shall not exceed such sum as may be found to be equivalent to the estimated earnings, during the three years preceding the injury, of a person in the same grade employed during those years in the like employment, and in the district in which the workman is employed at the time

of the injury.

SEC. IV. An action for the recovery under this act of compensation for an injury, shall not be maintainable unless notice that injury has been sustained is given within six weeks, and the action is commenced within six months from the occurrence of the accident causing the injury, or, in case of death, within twelve months from the time of death; provided always, that in case of death the want of such notice shall be no bar to the maintenance of such action, if the judge shall be of opinion

that there was reasonable excuse for such want of notice.

SEC. V. There shall be deducted from any compensation awarded to any workman, or representatives of a workman, or persons claiming by, under, or through a workman in respect of any cause of action arising under this act, any penalty or part of a penalty which may have been paid in pursuance of any other act of parliament to such workman, representatives, or persons in respect of the same cause of action; and where an action has been brought under this act by any workman, or the representatives of any workman, or any persons claiming by, under, or through such workman, for compensation in respect of any cause of action arising under this act, and payment has not previously been made of any penalty or part of a penalty, under any other act of parliament in respect of the same cause of action, such workman, representatives, or person shall not be entitled thereafter to receive any penalty or part of a penalty under any other act of parliament in respect of the same cause of action.

SEC. VI. (1) Every action for recovery of compensation under this act shall be brought in a county court, but may, upon the application of either plaintiff or defendant, be removed into a superior court in like

manner and upon the same conditions as an action commenced in a county court may be by law removed.

(2) Upon the trial of any such action in a county court before the judge without a jury, one or more assessors may be appointed for the

purpose of ascertaining the amount of compensation.

(3) For the purpose of regulating the conditions and mode of appointment and remuneration of such assessors and all matters of procedure relating to their duties, and also for the purpose of consolidating any actions under this act in a county court, and otherwise preventing multiplicity of such actions, rules and regulations may be made, varied and repealed from time to time, in the same manner as rules and regulations for regulating the practice and procedure in other actions in county courts.

"County court" shall, with respect to Scotland, mean the "sheriff's court," and shall, with respect to Ireland, mean the "civil bill court."

In Scotland any action under this act may be removed to the court of session at the instance of either party, in the manner provided by, and subject to, the conditions prescribed by section 9 of the sheriff courts (Scotland) act, 1877.

In Scotland the sheriff may conjoin actions arising out of the same occurrence or cause of action, though at the instance of different parties

and in respect of different injuries.

SEC. VII. Notice in respect of an injury under this act shall give the name and address of the person injured, and shall state in ordinary language the cause of the injury and the date at which it was sustained, and shall be served on the employer, or, if there is more than one employer, upon one of such employers.

The notice may be served by delivering the same to or at the residence of or place of business of the person on whom it is to be served.

The notice may also be served by post by a registered letter addressed to the person on whom it is to be served, at his last known place of residence or place of business; and, if served by post, shall be deemed to have been served at the time when a letter containing the same would be delivered in the ordinary course of post; and, in proving the service of such notice, it shall be sufficient to prove that the notice was properly addressed and registered.

When the employer is a body of persons corporate or unincorporate, the notice shall be served by delivering the same at or by sending it by post in a registered letter addressed to the office, or, if there be more

than one office, any one of the offices of such body.

A notice under this section shall not be deemed invalid by reason of any defect or inaccuracy therein, unless the judge who tries the action arising from the injury mentioned in the notice, shall be of opinion that the defendant in the action is prejudiced in his defence by such defect or inaccuracy, and that the defect or inaccuracy was for the purpose of misleading.

SEC. VIII. For the purpose of this act, unless the context otherwise

requires-

The expression "person who has superintendence intrusted to him" means a person whose sole or principal duty is that of superintendence, and who is not ordinarily engaged in manual labor.

The expression "employer" includes a body of persons corporate or

unincorporate.

The expression "workman" means a railway servant and any person to whom the employers and workmen act, 1875, applies.

[38 and 39 Vic., chap. 90, sec. 10. In this act, the expression

"workman" does not include a domestic or menial servant, but, save as aforesaid, means any person who, being a laborer, servant in husbandry, journeyman, artificer, handicraftsman, miner, or otherwise engaged in manual labor, whether under the age of twenty-one years or above that age, has entered into or works under a contract with an employer; whether the contract be made before or after the passing of this act, be express or implied, oral or in writing, and be a contract of service, or a contract personally to execute any work or labor.]

SEC. IX. This act shall not come into operation until the first day of January, 1881, which date is in this act referred to as the commence-

ment of this act.

SEC. X. This act may be cited as the employers' liability act, 1880, and shall continue in force till the thirty-first day of December, 1887, and to the end of the then next session of parliament and no longer, unless parliament shall otherwise determine; and all actions commenced under this act before that period shall be continued as if the said act had not expired.

This English act, passed in 1880, called the attention of employers and employés everywhere to the inconsistencies of the common-law rule. Many corporations resisted the enactment of laws which would tend, as they claim, to the great increase of the expenses of running their works or roads. Much fear was expressed on the passage of the bill through parliament that the results would be disastrous to industry and prevent dividends on the stock of railroads. The experience under the law, however, has not substantiated these fears, but one of the best effects of the law has been to induce greater care in the selection of agents. Perhaps this is the very greatest benefit that can be derived from such a statute. The careful administration of railroad service is one of the most vital features, so far as the public is concerned, and if the law stimulates the selection of the very best skill in the employment of men, it justifies its enactment. Certainly the financial disasters predicted have not occurred. All this agitation has reappeared in the United States. The first law, however, following in any great degree the English legislation, was quietly passed by the Alabama legislature February 12, 1885. The following is the full text of the Alabama law:

ALABAMA.

2590. Liability of master or employer to servant or employé for injuries.—When a personal injury is received by a servant or employé in the service or business of the master or employer, the master or employer is liable to answer in damages to such servant or employé as if he were a stranger, and not engaged in such service or employment, in the cases following:

(1) When the injury is caused by reason of any defect in the condition of the ways, works, machinery, or plant connected with or used

in the business of the master or employer.

(2) When the injury is caused by reason of the negligence of any person in the service or employment of the master or employer, who has any superintendence intrusted to him, whilst in the exercise of such superintendence.

(3) When such injury is caused by reason of the negligence of any person in the service or employment of the master or employer, to whose orders or directions the servant or employe, at the time of the injury, was bound to conform, and did conform, if such injuries resulted from

his having so conformed.

(4) When such injury is caused by reason of the act or omission of any person in the service or employment of the master or employer, done or made in obedience to the rules and regulations or by-laws of the master or employer, or in obedience to particular instructions given by any person delegated with the authority of the master or employer in that behalf.

(5) When such injury is caused by reason of the negligence of any person in the service or employment of the master or employer, who has the charge or control of any signal, points, locomotive engine, switch, car, or train upon a railway, or of any part of the track of a

railway.

But the master or employer is not liable under this section if the servant or employé knew of the defect or negligence causing the injury, and failed in a reasonable time to give information thereof to the master or employer, or to some person superior to himself engaged in the service or employment of the master or employer, unless he was aware that the master or employer, or such superior already knew of such defect or negligence; nor is the master or employer liable under subdivision one, unless the defect therein mentioned arose from, or had not been discovered or remedied owing to the negligence of the master or employer, or of some person in the service of the master or employer, and intrusted by him with the duty of seeing that the ways, works, machinery, or plant, were in proper condition.

2591. Personal representative may sue, if injury results in death.—If such injury results in the death of the servant or employé, his personal representative is entitled to maintain an action therefor, and the damages recovered are not subject to the payment of debts or liabilities, but shall be distributed according to the statute of distributions.

2592. Damages exempt.—Damages recovered by the servant or employé, of and from the master or employer, are not subject to the payment of debts, or any legal liabilities incurred by him. [Act of February 12, 1885. Vide Code of Alabama, vol. I, pp. 576-7.]

The agitation, as stated, was imported from Great Britain, and first appeared, so far as labor organizations, employés, and employers were concerned, in Massachusetts about 1882, for very soon after the passage of the English act the legislature of Massachusetts, in 1882, directed an investigation by the Bureau of Statistics of Labor of the whole subject of the liability of employers to workmen for injuries received while in the discharge of their duty, and also directed a consideration of what changes, if any, might be needed in the then existing laws relative to such labor. A very careful investigation of the law and facts was made upon the subject, and all its varied relationships, embarrassments, and the difficulties which surrounded it were reported in quite complete form to the legislature. The whole subject was brought to the basis of a few simple questions:

Ought employés to have the same right to recover damages for personal injuries that all others have? Should the rule of law which forbids employés from recovering damages from their employers for injuries caused by the negligence of fellow-employés, and without their own contributory negligence, be changed? Should they be allowed for similar injuries from the same cause the same right to damages from their employers that the rest of the world has? If by way of illustration an accident should occur on a railroad train, should a brakeman have the same right to sue for damages that a passenger has? If a brakeman's arm should be broken through the carelessness of a switchman or a tender should he possess the same right that a passenger would have for a similar injury?

These questions brought up the whole matter, and the English law and all the laws of the different states and of different countries, so far as they modify or restrict the common-law rule, were carefully and fully discussed, and this discussion resulted in the recommendation to the legislature of Massachusetts of a bill similar to the English statute, but simpler in its construction. This report was made in 1883. The subject was discussed in legislatures and in the public press until, in May, 1887, the legislature enacted a law as follows:

MASSACHUSETTS EMPLOYERS' LIABILITY ACT.

[Chapter 270, Acts of 1887.]

AN ACT to extend and regulate the liability of employers to make compensation for personal injuries suffered by employes in their service.

Be it enacted, etc., as follows:

SECTION 1. Where, after the passage of this act, personal injury is caused to an employé, who is himself in the exercise of due care and

diligence at the time-

(1) By reason of any defect in the condition of the ways, works, or machinery connected with or used in the business of the employer, which arose from or had not been discovered or remedied owing to the negligence of the employer or of any person in the service of the employer and intrusted by him with the duty of seeing that the ways, works, or machinery were in proper condition; or

(2) By reason of the negligence of any person in the service of the employer, intrusted with and exercising superintendence, whose sole or

principal duty is that of superintendence; or

(3) By reason of the negligence of any person in the service of the employer who has the charge or control of any signal, switch, locomotive engine, or train upon a railroad, the employé, or in case the injury results in death—

The legal representatives of such employé, shall have the same right of compensation and remedies against the employer as if the employé had not been an employé of nor in the service of the employer, nor en-

gaged in its work.

SEC. 2. Where an employé is instantly killed or dies without conscious suffering, as the result of the negligence of an employer, or of the negligence of any person for whose negligence the employer is liable under the provisions of this act, the widow of the deceased, or in case there is no widow, the next of kin, provided that such next of kin were at the time of the death of such employé dependent upon the wages of such employé for support, may maintain an action for damages therefor and may recover in the same manner, to the same extent, as if the death of

the deceased had not been instantaneous, or as if the deceased had con-

sciously suffered.

SEC. 3. The amount of compensation receivable under this act in cases of personal injury shall not exceed the sum of four thousand dollars. In case of death, compensation in lieu thereof may be recovered in not less than five hundred and not more than five thousand dollars, to be assessed with reference to the degree of culpability of the employer herein, or the person for whose negligence he is made liable; and no action for the recovery of compensation for injury or death under this act shall be maintained, unless notice of the time, place, and cause of the injury is given to the employer within thirty days, and the action is commenced within one year, from the occurrence of the accident causing the injury or death. [The notice required by this section shall be in writing, signed by the person injured or by some one in his behalf; but if from physical or mental incapacity it is impossible for the person injured to give the notice within the time provided in said section, he may give the same within ten days after such incapacity is removed, and in case of his death without having given the notice and without having been for ten days at any time after his injury of sufficient capacity to give the notice, his executor or administrator may give such notice within thirty days after his appointment.] (a) But no notice given under the provisions of this section shall be deemed to be invalid or insufficient solely by reason of any inaccuracy in stating the time, place, or cause of the injury; provided it is shown that there was no intention to mislead, and that

the party entitled to notice was not in fact misled thereby.

SEC. 4. Whenever an employer enters into a contract, either written or verbal, with an independent contractor to do part of such employer's work, or whenever such contractor enters into a contract with a subcontractor to do all or any part of the work comprised in such contractor's contract with the employer, such contract or subcontract shall not bar the liability of the employer for injuries to the employes of such contractor or subcontractor, by reason of any defect in the condition of the ways, work, machinery, or plant, if they are the property of the employer, or furnished by him, and if such defect arose, or had not been discovered or remedied, through the negligence of the employer or of some person intrusted by him with the duty of seeing that they were

in proper condition.

Sec. 5. An employé or his legal representatives shall not be entitled under this act to any right of compensation or remedy against his employer in any case where such employé knew of the defect or negligence which caused the injury, and failed within a reasonable time to give, or cause to be given, information thereof to the employer, or to some person superior to himself in the service of the employer, who had

intrusted to him some general superintendence.

SEC. 6. Any employer who shall have contributed to an insurance fund created and maintained for the mutual purpose of indemnifying an employé for personal injuries for which compensation may be recovered under this act, or to any relief society formed under chapter 244 of the acts of the year 1882, as authorized by chapter 125 of the acts of the year 1886, may prove, in mitigation of the damages recoverable by an employe under this act, such proportion of the pecuniary benefit which has been received by such employe from any such fund or society on account of such contribution of said employer as the contribution of

The portion in brackets was an amendment which was approved March 22, 1888, forming chapter 155, acts of 1888.

such employer to such fund or society bears to the whole contribution thereto.

SEC. 7. This act shall not apply to injuries caused to domestic servants, or farm laborers, by other fellow-employés, and shall take effect on the first day of September, 1887.

Approved May 14, 1887.

In the discussion which preceded the enactment of the foregoing law all the arguments which had been brought against a similar enactment in the British parliament were forcibly arrayed against the passage of the bill; yet there were very many railroad men, either in the administrative forces or in the law departments, who saw plainly that such a law as that proposed could work no serious injury to the railroad interests of the country, but would, on the other hand, conserve the safety of the public and insure the highest order of intelligence in the great body of railway employés; and while but a short time has elapsed since the enactment, the experience so far has been similar to that in England. The fears of financial embarrassment, or of entailing expense on employers under the law, have not been realized. It is true, however, that many roads now offer much inducement for their men to secure policies in accident insurance companies, or themselves secure them, so as to protect the treasury of the road from any drain which might come through the workings of the liability law. The experience of Great Britain, of Alabama, and of Massachusetts must be studied . and watched carefully for a series of years before the fullest judgment can be pronounced on the wisdom of the legislation described. While Alabama and Massachusetts are the only states that have practically re-enacted the English law of 1880, many other states have in some way and to some extent weakened the force of the common-law rule. These state modifications are as follows:

LAWS OF THE SEVERAL STATES AND TERRITORIES RELATING TO THE LIABILITY OF EMPLOYERS FOR PERSONAL INJURIES TO THEIR EMPLOYES.

CALIFORNIA. (a)

SEC. 1969. When employer must indemnify employé.—An employer must indemnify his employé, except as provided in the next section, for all that he necessarily expends or loses in direct consequence of the discharge of his duties as such, or of his obedience to the directions of his employer, even though unlawful, unless the employé at the time of obeying such directions believed them to be unlawful.

SEC. 1970. When not.—An employer is not bound to indemnify his

a An employer is not liable for the negligence of a co-employé, unless negligent in the selection of the co-employé: Hogan v. C. P. R. R., 49 Cal., 125; Collier v. Steinhart, 51 Cal., 116; MoLean v. Blue Point Gravel M. Co., 51 Cal., 257. In the last case cited it was held by the supreme court that the code "recognizes no distinction growing out of the grades of employment of the respective employés; nor does it give any effect to the circumstance that the fellow-servant through whose negligence the injury came was the superior of the plaintiff in the general service in which they were in common engaged." But in Besson v. Green Mountain G. M. Co., 57 Cal., 20, it was held that a superintendent of a mining company was not a fellow-employé with

employé for losses suffered by the latter in consequence of the ordinary risks of the business in which he is employed, nor in consequence of the negligence of another person employed by the same employer in the same general business, unless he has neglected to use ordinary care in the selection of the culpable employé.

SEC. 1971. Employer to indemnify for his own negligence.—An employer must in all cases indemnify his employé for losses caused by the former's

want of ordinary care. [Civil Code of California, 1885, p. 345.]

COLORADO.

This state has no enactment modifying the common-law liability of employers to their employés, but article XV, section 15, of its constitution provides that—

It shall be unlawful for any person, company, or corporation to require of its servants or employés, as a condition of their employment or otherwise, any contract or agreement whereby such person, company, or corporation shall be released or discharged from liability or responsibility on account of personal injuries received by such servants or employés while in the service of such person, company, or corporation, by reason of the negligence of such person, company, or corporation, or the agents or employés thereof, and such contracts shall be absolutely null and void.

.DAKOTA.

The Civil Code of Dakota, 1885 (sections 1129, 1130, and 1131), contains the same provisions as those of the Code of California.

FLORIDA.

In Florida the following act was approved June 7, 1887:

- 1. No person shall recover damages from a railroad company for injury to himself or his property when the same is done by his consent or is caused by his own negligence. If the complainant and the agents of the company are both at fault, the former may recover, but the damages shall be diminished by the jury trying the case in proportion to the amount of default attributable to him.
- 2. If the person injured is himself an employé of the company, and the damage was caused by another employé, and without fault or negligence on the part of the person injured, his employment by the company shall be no bar to the recovery, and no contract which restricts such liability shall be legal or binding.

Like the similar enactments of Georgia and Kansas, it applies to every class of railroad employés; and it also prohibits the corporations from contracting themselves out of their liability.

the plaintiff in the sense intended by sec. 1970. In Stephens v. Doe, 73 Cal., 26 (decided in 1887), it was held that the foreman of a mining company was a fellow-employ6 within the meaning of sec. 1970, and the court held the defendant not liable for an injury resulting to the plaintiff from obeying the orders of the foreman of the mine, which orders were, as alleged, negligently given. In Trask v. Cal. S. R. R. Co., 63 Cal., 96, it was held that the rule exempting the employer (in this case a railroad company) from liability for injuries to an employe from the negligence of a fellow-employe, has no application where the negligent and unskilful manner in which the road was constructed was the occasion of the injury.

GEORGIA.

SEC. 2083. Liability of railroad companies as carriers.—Railroad companies are common carriers, and liable as such. As such companies necessarily have many employés who cannot possibly control those who should exercise care and diligence in the running of trains, such companies shall be liable to such employés as to passengers for injuries arising from the want of such care and diligence.

SEC. 3036. Injury by co-employé.—If the person injured is himself an employé of the [railroad] company, and the damage was caused by another employé, and without fault or negligence on the part of the person injured, his employment by the company shall be no bar to the recovery. [Acts of 1855–56, p. 155; vide Code of Georgia, 1882, sections 2083, 3036, pp. 509, 762.]

IOWA. (a)

SEC. 1307. Every corporation operating a railway shall be liable for all damages sustained by any person, including employés of such corporation, in consequence of the neglect of agents, or by any mismanagement of the engineers or other employés of the corporation, and in consequence of the wilful wrongs, whether of commission or omission, of such agents, engineers, or other employés, when such wrongs are in any manner connected with the use and operation of any railway, on or about which they shall be employed, and no contract which restricts such liability shall be legal or binding. [McClain's Annotated Statutes of Iowa, 1884, vol. I, p. 357.]

KANSAS.

SEC. 5204. Every railroad company organized or doing business in this state shall be liable for all damages done to any employé of such company in consequence of any negligence of its agents, or by any mismanagement of its engineers or other employés to any person sustaining such damage. [Laws of 1874, chapter 93, section 1; took effect March 4, 1874; vide Compiled Laws, 1885 (Dassler), p. 776.]

MINNESOTA.

By chapter 206, laws of 1885, as amended by chapter 59, laws of 1887, it is provided that all railroad corporations operating lines of road in this state shall be liable for all injuries to their engineers or firemen resulting from their being obliged to labor for a longer period than eighteen hours in any one day.

MONTANA.

SEC. 697. That in every case the liability of the [railroad] corporation to a servant or employé, acting under the orders of his superior, shall be the same in case of injury sustained by default or wrongful act of

a In Hunt v. C. & N. W. R. Co., 26 Iowa, 363, the court held that the intention of the section is merely to give the employé a right of action in case of injury by the negligence of co-employés, and not to change the degree of care necessary, which is, as between master and servant, that of ordinary care and diligence only. The degree of care required as to employés is not the same as that demanded to be exercised as to passengers.

his superior, or to an employé not appointed or controlled by him, as if such servant or employé were a passenger. [Compiled Statutes, 1887, chapter XXV, railroad corporations.]

WISCONSIN.

Section 1816 of the Revised Statutes of Wisconsin, 1878, contained the following provision passed in 1875:

Every railroad corporation shall be liable for all damages sustained by any agent or servant thereof by reason of the negligence of any other agent or servant thereof, without contributory negligence on his part, when sustained within this state, or when such agent or servant is a resident of and his contract of employment was made in this state, and no contract, rule, or regulation between any such corporation and any agent or servant shall impair or diminish such liability.

By chapter 232 of the laws of 1880 this section of the Revised Statutes was repealed, but all rights of action which had accrued prior to March 15, 1880, were saved.

WYOMING.

Chapter 97 of the Compiled Laws of Wyoming, 1876, contained the following act, approved December 7, 1869, and entitled:

AN ACT to protect railroad employes who are injured while performing their duty.

Any person in the employment of any railroad company in this territory, who may be killed by any locomotive, car, or other rolling stock, or other property of said company, whether in the performance of his duty or otherwise, his widow or heirs may have the same right of action for damages against such company as if said person so killed were not in the employ of said company; any agreement he may have made, whether verbal or written, to hold such company harmless or free from an action for damages in the event of such killing, shall be null and void, and shall not be admitted as testimony in behalf of said company in any action for damages which may be brought against them; and any person in the employ of said company who may be injured by any locomotive, car, or other rolling stock of said company, or by other property of said company, shall have his action for damages against said company the same as if he were not in the employ of said company, and no agreement to the contrary shall be admitted as testimony in behalf of said company.

The above act is not contained in the Revised Statutes of 1887 (the latest compilation), and it was expressly provided that all acts omitted from that revision were to be regarded as repealed, so that the act quoted is no longer in force.

The foregoing citations from statutes of different states may not be all the statutory provisions affecting the common law as to the liability of employers for personal injuries to their employes, but they constitute the chief legislative interferences. In some states where no particular law exists, there have been some decisions of the courts which tend to show the growth of opinion on the subject under discussion. Only a few such decisions are given, and they simply show the temper of the judicial mind.

ILLINOIS.

The supreme court holds that the question whether a section hand engaged in loading iron on a car was at the time of the accident a fellow-servant with those in charge of the train which ran over him and on which he had ridden to his work was one of fact and not for the court, and a finding that they were not fellow-servants was warranted by the evidence. [C. and A. R. Co. v. Kelly (21 N. E. Rep., 203); noted in Railway Gazette, September 27, 1889.]

INDIANA.

The supreme court held that a railroad company cannot avoid liability for injuries to a servant from a defective brake, on the ground that it was the duty of its inspector to see that the brake was in repair, and that the inspector was a co-servant of the injured person. [Cinn., H., and D. R. Co. v. McMullen (20 N. E. Rep., 287); noted in Railway Gazette, July 26, 1889.]

KENTUCKY.

The common-law rule of liability has not been modified by statute; but in the case of Louisville and Nashville R. Co. v. Robinson (4 Bush., 507) the supreme court held that the implied undertaking between a railroad company and its employés in the same class of service does not exonerate the company from liability for damages resulting to one of such co-agents from extraordinary or gross negligence of another of such agents in the same line of service. In the same case it was held that engineers and brakemen are in the same class or line of service, and the fact that the engineer served on a passenger and the brakeman on a freight train does not affect the reason and policy of implying, as between themselves, such associations, knowledge, and trust as to have induced an undertaking mutually to risk all the contingencies which the ordinary skill and care of each other in his line of service could not avert.

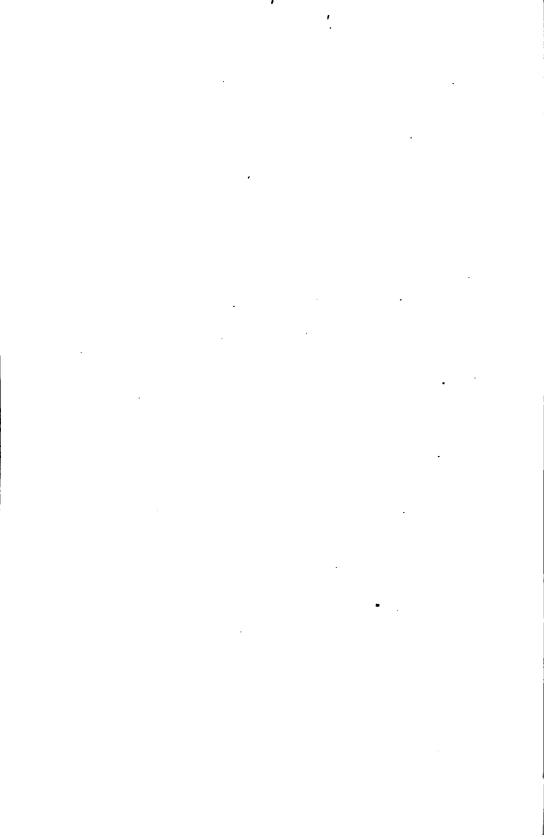

TEXAS.

The supreme court holds that a car inspector is not a fellow-servant with a brakeman but is a representative of the employer. [Carpenter v. Mexican Nat. R. Co., (39 Fed. Rep., 315); noted in Railway Gazette, January 3, 1890.]

A curious species of legislation has been indulged in for the purpose of preventing the defeat of law or laws which might have been enacted for the benefit of the employé. These are the laws restricting the rights of the employer to contract himself out of the liability imposed by law; that is to say, should a state enact a law like that in Massachusetts or Alabama, and make no provision to the contrary, a railroad corporation or other employer might, by contract with the

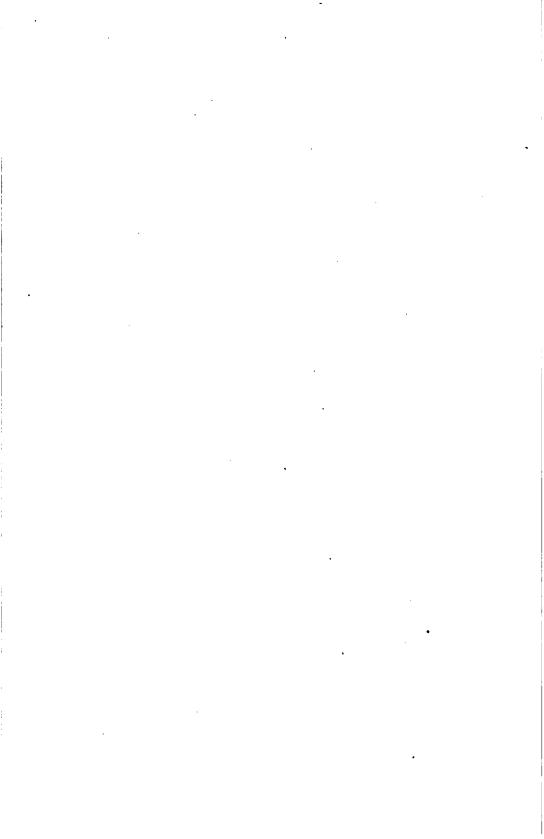

employé, place itself or himself outside the liability imposed. In Iowa. Florida, and Massachusetts the employer is restricted from making such a contract. In Iowa and Florida, where a limited liability law is in force, it is provided that "no contract which restricts such liability shall be legal or binding." An Iowa decision, however (59 Iowa, 416), holds that this does not apply to a written release for all claims for damages, resulting from injuries, which have already accrued. Massachusetts, under the law of 1882, it is provided that "no person or corporation shall, by special contract with persons in his or its employ, exempt himself or itself from any liability which he or it might otherwise be under to such persons for injuries suffered by them in their employment, and which result from the employer's own negligence, or from the negligence of other persons in his or its employ;" but the legislature of the last named state, in 1887, while not repealing that portion of the law just quoted, recognized the justice of allowing an employer who was willing to insure his employé to be to some extent free from the provisions of the employers' liability act, and so provided as follows:

Any employer who shall have contributed to an insurance fund created and maintained for the mutual purpose of indemnifying an employé for personal injuries for which compensation may be recovered under this act, or to any relief society formed under chapter 244 of the acts of the year 1882, as authorized by chapter 125 of the acts of the year 1886, may prove in mitigation of the damages recoverable by an employé under this act such proportion of the pecuniary benefit which has been received by such employé from any such fund or society on account of such contribution of said employer as the contribution of such employer to such fund or society bears to the whole contribution thereto.

CHAPTER III.

TIME AND EARNINGS—ANALYSIS OF GENERAL TABLES.

CHAPTER III.

TIME AND EARNINGS-ANALYSIS OF GENERAL TABLES.

From the general tables in chapter IV nearly all the important information relating to the economic conditions under which railway employés labor is ascertainable, and the analysis of the general tables is the best method of bringing out the specific things embraced in them. The integrity of a statistical report is measured by the fulness of the detail tables, but its usefulness is measured more thoroughly by the analyses which accompany the tables; so, sufficient detail has been given in the general tables to establish the basis of this analysis, and yet the tables appear very bulky. They have, however, been reduced to the smallest proportions commensurate with statistical integrity.

The first feature that arrests attention is the great number of titles under which railroad employés are engaged. The whole number of specified titles found in the payrolls of the sixty roads investigated is 1,106. It will be sufficient for the purposes of this analysis if the simple designations found on the payrolls and the number of employés under each, with the number of roads on which such designations were found, are given. These points will be found in the following tabulated statement:

NUMBER OF EMPLOYES OF SIXTY SYSTEMS OR ROADS COMBINED, BY OCCUPATIONS.

In order to reduce this great number of designations so as to facilitate analysis the occupations have been grouped, each group being composed of related occupations, that is, of occupations pertaining to the same branch of the service, though sometimes differing quite widely in rate of pay. In a general way the make up of the group is well indicated by its heading; but in occasional instances a broad construction must be applied to the heading. The difficulties in the way of a wholly satisfactory grouping are almost insuperable. The table showing time and earnings for these groups begins on page 108.

GROUPS OF RELATED OCCUPATIONS.

BRAKEMEN AND FLAGMEN.

Brakemen, avenue.
Brakemen, coal train.
Brakemen, construction train.
Brakemen, freight.
Brakemen, freight and passenger.
Brakemen, freight and work train.
Brakemen, freight yard.
Brakemen, gravel train.
Brakemen, bead.

Brakemen on pushers.
Brakemen, passenger.
Brakemen, shifting.
Brakemen, suburban.

Trunnel door tenders.
Watchmen, bridge.
Watchmen, crossing.
Watchmen, track.
Watchmen, tunnel.

EMPLOYÉS OF SCOWS, FERRIES, ETC.

Captains of scow. Employés of ferry. Ferrymen. Float captains. Float tenders. Foremen, transfer laborers. Laborers, transfer. Riggers. Sailmakers. Scowmen, work train. Transfermen. Transport tug employés.

EMPLOYÉS ON WHARVES, DOCKS, ETC.

Cranemen.
Derrickmen.
Dipper teaders.
Dokmasters.
Elevatormen.
Foremen, dock laborers.
Foremen, elevator hands.
Foremen, pier laborers.
Foremen, pier laborers.
Foremen, stavedores.
Foremen, wharf hands.

Hoisters and wharf hands. Jackmen, steam shovel. Laborers, dock. Laborers, pier. Laborers, pier. Laborers, pier. Laborers, steam shovel. Laborers, steam shovel. Laborers, wharf. Piledrivers.

Pilers.

Pile sharpeners.
Policemen, dock.
Pulley tenders.
Silp tenders.
Steam shovel hands.
Stevedores.
Watchmen, dock.
Weighmen, grain elevator.
Wharfingers.

EMPLOYÉS OF REPAIR SHOPS.

Bolt repairers.
Foremen, car repairers.
Hose menders.
Jobbers.
Repairers, car.
Repairers, car, helpers.

Repairers, engine.
Repairers, planer pulley.
Repairers, pump.
Repairers, signal.
Repairers, steam beater.
Repairers, switch.
Repairers, tank.

Repairers', tank, helpers.
Repairers, tank and truck.
Repairers, tender.
Repairers, tender, helpers.
Repairers, tool.
Repairers, truck.
Repairmen.

ENGINEMEN (AND ENGINEERS BUNNING TRAINS) AND HOSTLEBS.

Engineers, assistant.
Engineers, coal train.
Engineers, dummy.
Engineers, freight.
Engineers, freight and coal.
Engineers, freight and passenger.
Engineers, coomotive.
Engineers, passenger.

Engineers, shifting.
Engineers, switching.
Engineers, work train.
Engineers, yard.
Engineers and helpers.
Engineers and switchmen.
Engineers and watchmen.
Engineers and watchmen.

Enginemen, freight.
Enginemen, phásenger.
Enginemen, shifting.
Enginemen, work train.
Enginemen, yard.
Hostlers' helpers.
Hostlers' helpers.

ENGINEERS, STATIONARY.

Engineers, bridge. Engineers, crane. Engineers, dock. Engineers, elevator. Engineers, hoisting. Engineers, piledriver. Engineers, pumping.
Engineers, repairing.
Engineers, roundhouse.
Engineers, shop.
Engineers, stationary.
Engineers, steam hammer.

Engineers, steam shovel.
Engineers, steam shovel, assistant.
Enginemen, shop.
Enginemen, stationary.

FIREMEN, STATIONARY.

Boiler heaters. Boiler heaters and wipers. Fire tenders. Firemen, elevator. Firemen, engineroom.

Firemen, roundhouse. Firemen, shop. Firemen, stationary. Firemen, steam shovel. Firemen, yard.

Furnace tenders. Heaters. Heaters' helpers. Laborers, firemaking. Steam generators.

FIREMEN ON TRAINS.

Firemen. Firemen, coal train. Firemen, dummy. Firemen, freight. Firemen, freight and coal. Firemen, freight and passenger. Firemen, locomotive. Firemen, passenger.

Firemen, shifting. Firemen, switching. Firemen, work train.

INSPECTORS AND EXAMINERS.

Examiners. Examiners, boiler. Examiners, car. Examiners, fire box. Examiners, ner box.
Examiners, spark arrester.
Examiners, stay bolt.
Examiners, tender brake.
Examiners, ticket.
Examiners, watch.
Foremen, car inspectors.
Foremen, inspectors. Inspectors. Inspectors, air brake.
Inspectors, air hose.
Inspectors, ashpan.
Inspectors, axle.
Inspectors, ballast.
Inspectors, boiler.
Inspectors, brake.
Inspectors, bridge.

Inspectors, building. Inspectors, car. Inspectors', car, helpers. Inspectors, car works. Inspectors, cargo.
Inspectors, coal.
Inspectors, dock.
Inspectors, dredging.
Inspectors, engine.
Inspectors, reight.
Inspectors, inspector Inspectors, cargo.

Inspectors, pump. Inspectors, rail. Inspectors, rod. Inspectors, scale. Inspectors, seal. Inspectors, seal.
Inspectors, signal.
Inspectors, stack.
Inspectors, stack.
Inspectors, stack.
Inspectors, tank.
Inspectors, tank.
Inspectors, timber.
Inspectors, timber.
Inspectors, track. Inspectors, track.
Inspectors, wheel.
Inspectors and civil engineers.
Inspectors and civil engineers.
Inspectors and repairers, car. Inspectors and storekeepers.

LAMPMEN, LIGHT TENDERS, ETC.

Engine lighters. Gasmen. Gasmen, assistant. Lamp fillers.

.

Lamp lighters. Lampmen. Lamp tenders. Lighters-up.

Light tenders. Signal lighters. Switch lamp tenders. Switch light tenders.

MASONS, BRICKLAYERS, ETC.

Bricklayers. Bricklayers' helpers. Foremen, bricklayers. Foremen, masons. Foremen, stonecutters. Foremen, stonemasons. Hod carriers.

Laborers, masons'. Laborera, stonemasons'. Masons. Masons, bridge. Masons' helpers. Master builders. Master masons.

Plasterers. Slaters. Stonecutters. Stonecutters' helpers. Stonemasons. Stonemasons' helpers.

METALWORKERS.

Air-brake and steam fitters. Air-hose men. Apprentices. Apprentices, car works. Ashpanmakers. Axle cutters. Axle lathemen. Axle straighteners. Axle turners. Axle turners' helpers. Beltmen. Blacksmiths. Blacksmiths' apprentices.

Blacksmiths' helpers. Blacksmiths' shop boys. Boiler fitters. Boilermakers. Boilermakers' apprentices. Boilermakers' helpers. Boilermen. Boilermen, assistant. Bolt changers. Bolt cutters. Bolt headers. Bolt heaters. Bolters.

Boltmakers. Brassborers. Brassfinishers. Brassfinishers' helpers. Brassmoulders. Brassmoulders' apprentices. Brassmoulders' helpers. Brassturners. Brassworkers. Breakers. Buggymen. Carmen. Casting chippers.

METALWORKERS-Concluded.

Catchers. Catchers' helpers. Caulkers. Chargers. Coppersmiths.
Coppersmithe' apprentices.
Coppersmiths' helpers. Coremakers. Corkers. Croppers. Cupolamen. Cutlera Dopers. Dapers.
Drag outs.
Drillers.
Drillers, head.
Drillers' helpers.
Drillers, work train.
Drillers, gard.
Drillers, samen. Drillpressmen. Dummy boys Feeders. Fenders, machine shop. Fitters. Fitters' helpers. Flange turners. Flangers. Floormen. Flue borers. Flue caulkers. Flue cutters. Flue fitters. Flue punchers. Flue setters. Flue testers. Flue welders Foremen, blacksmiths.
Foremen, boilermakers.
Foremen, brassmoulders. Foremen, brassmoulders.

Lampmakers.
Latohmen. Lathemen. Layers-off. Locksmiths. Locksmiths' helpers. Machine hands. Machine runners, Machine runners' helpers. Machine shop hands. Machine tenders. Machinemen. Machinemen.
Machinists' apprentices.
Machinists' helpers.
Machinists' helpers.
Machinists and watchmen.
Master car builders.
Master machinists.
Master machinists. Master mechanics.
Master mechanics, assistant.
Mechanics, Mechanics, helpers. Melters. Moulders. Moulders' apprentices. Moulders' helpers. Muckers. Nippers. Nut outters. Nut tappers. Nut tappers and bolt cutters. Packers. Pattern filers. Patternmakers.
Patternmakers' apprentices.
Patternmakers' helpers. Pipers.
Pipefitters.
Pipefitters' helpers. Pipelayers. Piston packers. Planers. Plumbers. Plumbers' helpers. Polishers. Polishers' helpers.

Puddlers. Puddlers' helpers. Punchers. Punchers and shearers. Rivet boys. Rivet heaters. Riveters. Riveters, bridge. Riveters' helpers. Roll turners. Rollers. Rollers' helpers. Roofers. Roughers. Scalemakers Screw cutters. Shearmen. Shearmen's helpers. Sheet-iron workers. Sheet-iron workers' helpers. Shop boys. Shop hands. Sledgers. Smiths, car. Spoutsmen. Springmakers. Stackmakers. Steam and gas fitters. Steamfitters. Steam hammer hands. Steam hammer hands' helpers. Straighteners. Strappers. Strikers. Tank valve fitters. Tanners.
Tinners' apprentices.
Tinners' helpers.
Tinsmiths.
Tinsmiths' apprentices.
Tinsmiths' helpers. Tool dressers. Tool grinders. Toolmakers, apprentices, Track drillers, Truck builders. Tube welders. Tubers. Turners. Turners.
Turners, drillers, etc.
Water pipe men.
Wheel borers.
Wheel deeaners.
Wheel fitters' helpers.
Wheel strippers.
Wheel strippers. Wheelers. Wheelmen. Wheelpressmen. Wheelpressmen's helpers.

MINERS, QUARRYMEN, ETC.

Drillers, coal.
Foremen, gravel pit.
Foremen, miners and quarrymen.
Foremen, quarrymen.
Foremen, rock gang.
Foremen, atone quarry.

Hammermen.

Laborers, gravel pit. Laborers, gravel train. Laborers, quarry. Laborers, stone gang. Miners. Pitmen.

Pressmen.

Pitmen's helpers.
Powdermen.
Quarrymen.
Quarrymen's helpers.
Sandmen.

PAINTERS, DECORATORS, UPHOLSTERERS, ETC.

Foremen, painters.
Foremen, trimmers.
Foremen, upholsterers.
Gilders.
Grainers.
Laborers, paint shop.
Letterors.

Paint preparers.
Painters.
Painters' apprentices.
Painters, car.
Painters' helpers.
Painters and washers.
Silverplaters.

Silverplaters' helpers. Trimmers. Upholsterers. Upholsterers' apprentices. Upholsterers' helpers. Varnishers.

WOODWORKERS.

WOOD AND COAL HANDLERS.

Coal dumpers,
Coal handlers.
Coal heavers.
Coal passers.
Coal shovellers.
Coalers.
Coalers and wipers.

Dumpmen, coal.
Foremen, coal heavers.
Foremen, fuel preparers.
Fuel preparers.
Fuelmen.
Fuelmen and storemen.
Fuel station tenders.

Laborers, coal dump. Laborers, coal wharf. Laborers, fuel. Laborers, wood train. Laborers, wood yard.

CLASSIFIED TIME AND EARNINGS.

Wage statistics heretofore have largely been presented on the basis of averages. Unfortunately for the scientific side of statistics, these averages have been too often the result found by taking the rate of pay per day, per week, or per month of men employed in specific occupations, and from such rates and the estimated average number of men deducing average yearly earnings. For certain economic purposes such an average is passably indicative of what might be earned and of the general wage-earning power in given industries. Of late years the demand has been that the employes should be classified, not only minutely as to occupations, but as to rates of pay and time employed, and the chief value of this report, so far as time and wages are concerned, is to be found in a thoroughly scientific classification, not only of the time employed of each individual employé of the roads considered, but of rates by day and by year, these rates being actual rates paid, and the yearly amounts being the actual earnings of each employé, as shown by the pay-rolls. Classifications conforming to this scientific basis have been very meager

hitherto, covering but few persons. They have, to be sure, in some sense been given by great industries, as in the census of Massachusetts for 1885 and the Fourth Annual Report of the Connecticut Bureau of Statistics of Labor, but even then for the average number of persons employed.

An unavoidable difficulty accompanies all great calculations of wage statistics, such as are found in our state and federal censuses. Employers are called upon to return the number of persons employed. Formerly, this was the form in which the question was put: "The number of persons employed?" The vagueness of the information resulting from such an inquiry became apparent, and the attempt has been made in recent censuses to get a more specific and exact statement as to the number of persons employed. This has been sought through the division of the question, employers being asked to state the greatest number employed at any one time, the least number employed at any one time, and the average number, and in some instances they have been asked to state the number employed on a certain day, and also at what time the greatest number was employed, as well as the time of the employment of the least number. These subdivisions, while showing the fluctuations of employment, did not help in ascertaining average wages. A true statement could be derived from census returns as to the aggregate wages paid in a state, or in an industry, or in the whole country, and it has been the custom of writers and speakers to divide the aggregate amount of wages paid in a given instance by the average number of persons employed under the same circumstances. The viciousness of such a process has been shown so often and so clearly that statisticians are endeavoring to obviate the difficulties and arrive at more approximately exact results. One sees without much study that by dividing the sum representing the aggregate wages paid by the number of persons employed the divisor is very sure to be a fluctuating one, especially when the attempt is made to compare two periods of time, for in the one it may occur that the divisor represents the largest number of employés, while at another period the divisor may represent either the least number or the average number of persons employed during a year. To overcome these obstacles in the way of securing an actual quotient many writers have insisted that there should be a perfect classification as to individual employés, in order to show how many there are above certain given points, or below such points; as: How many are in receipt of the average wage stated; or, How many there are who do not receive the average, etc. And this report, so far as time, rates, and earnings are concerned, has been made on the latter basis, but the difficulties of this method have been developed by the report, and the necessity has arisen of comparing the average earnings with the actual, in order to secure statistical integrity. It will probably be shown that the truest way after all is to consider positions necessary for the carrying on of an industry, rather than the number of separate dividuals which may have been employed in filling positions.

The illustrations of what has been said will appear as the tables are discussed.

The first of the general tables in chapter IV shows in three classes the classified time and the earnings of the individual employés of the roads, first, as to the class in which the earnings are rarely above \$500 per annum; second, as to the class in which the earnings are frequently from \$500 to \$1,000 per annum; and third, as to the class in which the earnings are frequently from \$1,000 to \$2,000 per annum. The table, as printed, however, is only for ten roads, instead of sixty, to avoid bulkiness, but the ten roads relate to groups covering the whole United States, as stated in chapter I, and as will be more thoroughly described in chapter IV. From this table I two summaries have been drawn, which summaries, however, relate to the whole sixty roads, and not to the ten simply. The first of these summaries is brought forward here for purposes of statistical harmony. It shows the classified time and earnings of the whole number of employés or the sixty systems or railroads covered, considered by groups of rates, and is followed by a table of percentages of employés in similar form.

It may be stated at this point that in the case of employés working by the month the daily rate has been arrived at by computation. In the case of employés working at two or several rates of pay within the year, they have been assigned to the daily rate in vogue nearest to their average daily earnings (the quotient of their entire earnings divided by their entire number of days). In the case of employés working at two or several occupations, they have been assigned to the principal one when one, as was usually the case, covered the major part of their service. When, however, they worked at two occupations about equally long, they have been assigned to each. This occasioned a small amount of duplications which is elsewhere referred to.

The summary mentioned here follows:

H. Ex. 336-6

These two tables show the facts outlined for 241,910 employés. Of this number 224,570 are employed on specific time, as by the day or by the month, while 17,340 are employed by the mile, the trip, the piece, under contract, or on commission, or a combination of these with day work, so that the rate and time cannot be stated, and the economic facts of this number do not enter into the tables of rate and time employed, but they do as to earnings.

Looking at the time employed, we find that of the 224,570 employés involved, 56,404, or 25.1 per cent. of the whole number, are employed 25 days or less out of the whole year; 25,684, or 11.5 per cent. of the whole, are employed from 26 to 50 days; 31,014, or 13.8 per cent., are employed from 51 to 100 days, and 18,861, or 8.4 per cent., from 101 to 150 days; these numbers, which constitute 58.8 per cent. of the whole number of employés working on the roads considered, were employed less than one-half year. It will also be seen that 44,331 or 19.7 per cent. were working from 151 to 300 days; this leaves 42,719, or 19 per cent. of the whole, working from 301 to 365 days, and 5,557, or 2.5 per cent. of the whole, working more than the full year—that is, over 365 days. These two amounts constitute 21.5 per cent. of the whole as working the whole year and over.

The work day on most of the roads is ten hours, and all the tables as to time and earnings have been reduced to the ten-hour basis. This plan was absolutely necessary in order to secure any intelligible results; so the last numbers given, constituting 21.5 per cent. of the whole number of employés, as working 301 days and over, are those who have worked the regular time and extra time, and it is probably within this number that the Sunday workers on the roads are mostly to be found. An effort was made to secure a reasonably accurate statement of the amount of Sunday work performed on the roads, but the difficulties were so great that it had to be abandoned for the time.

It should be remembered here that the 241,910 employes involved mean individual employes, and not the average number employed on the roads at any one time—that is to say, on the sixty roads covered by the investigation there were found on the pay rolls the accounts of 241,910 persons. What this means, reduced to the number necessary to do the work on full time, will be stated later on.

The two tables just presented give the rates of pay of the whole number of employés, for the sake of compactness and weight by groups of daily rates, each group having a range of 20 cents, a variation sufficiently small not to impair the validity of the statements made. The daily rate is thus seen to range from 21 cents per day or under to \$9.60 per day. The following table shows the per cent. as well as the number for each different group:

NUMBER AND PER CENT. OF TIME WORKERS OF SIXTY SYSTEMS OR ROADS BY GROUPS OF RATES.

This table brings out the characteristics of a classification as to rates. It will be seen that 78.98 per cent. are paid at rates ranging from \$1 to \$2 per day. The average daily rate of all the employés paid by specific time on the sixty roads is \$1.64½ (as will be shown on page 160); yet 63.87 per cent. of the whole number received less than the average rate of all, while only 36.13 per cent. received above the average for all.

Turning to the earnings side of the tables given first above, we find the classifications ranging from \$100 and under to \$2,001 and over. As the largest number in the exhibit of time, 56,404 or 25.1 per cent., is found in the column for those working 25 days and under, so the largest number in the exhibit of earnings, 101,905, or 42.1 per cent., is found in the column for those earning \$100 and under; 33,621, or 13.9 per cent., earn from \$101 to \$200 per annum, and 21,517, or 8.9 per cent., earn from \$201 to \$300 per annum. These numbers, earning \$300 or less per annum, constitute 64.9 per cent. of the whole number of employés considered; in fact, the concentration, as shown by the tables above, is below \$300 per annum, the numbers for those earning above \$300 growing smaller, and rapidly smaller, a fair percentage, 20,207, or 8.3 per cent. of the whole, earning from \$301 to \$400 per annum, and about the same number, 20,522, or 8.5 per cent., earning from \$401 to \$500 per annum. Thus, 81.7 per cent. earn \$500 or less per annum.

The possible earnings for positions instead of individuals are shown on pages 147 to 160.

So far the daily rates and the earnings, classified as to time and amounts, have been considered for the whole body of employés; but from the general tables a shorter table has been constructed which shows the daily rates of pay and the annual earnings, classified on a broader basis for the leading occupations of the roads; that is to say, for those occupations which constitute the most important elements of railway

labor. These points for leading occupations in the whole sixty systems or roads will now be presented. Where employes were paid by the mile, trip, piece, contract, or commission, earnings only are given,

DAILY RATES OF PAY OF EMPLOYES IN LEADING OCCUPATIONS OF SIXTY SYSTEMS OR ROADS.

The following table differs materially from the preceding. It really is a condensation into 24 classes of Table II, Chapter IV, pp. 514-791. Table II shows for the whole sixty systems or roads the aggregate number of employés by groups of daily rates, in each occupation, with the days worked and amount earned in a year. The whole 1,106 specific

	·									·	

The tables just given are so clear that extended analysis need not be entered into. The last of these tables shows by percentages of time and earnings (by groups of occupations), the relation of each group to the whole number of employés in all respects, not only as to time worked, but earnings for the year. The numerical importance of each class differs from the economic importance. Out of the whole 241,910 persons employed during the year covered, 49,245 are trainmen—brakemen and flagmen, conductors and pilots, enginemen (with engineers running trains) and hostlers, and firemen on trains, aggregating this number. The remainder are laborers of various grades. Trainmen thus constitute about 20 per cent. of the whole number of individuals. Taking the average number of men employed on the roads of the whole country during the year—689,912, approximately, as given by the Interstate Commerce Commission—and the trainmen, switchmen, and flagmen constitute 22 per cent. of the whole number.

From the table given of daily rates of pay and annual earnings in leading occupations for sixty systems or roads, an interesting summary is drawn, which will now follow. In this table the occupations and the number of roads to which the occupations apply are given. This little recapitulation offers some interesting comparisons with the whole number of persons employed, as already given. Take baggagemen as an illustration: The average daily pay of baggagemen on the sixty roads under consideration is \$1.51, and 62 per cent. receive less than \$1.62 per day. Looking at conductors, we find the average daily rate of pay is \$2.63, and 89 per cent. of them all receive \$2 a day and over; while for engineers, \$3.22½ represents the average daily pay, and 93.9 per cent. receive over \$2 per day.

SUMMARY OF DAILY RATES OF PAY OF EMPLOYES IN LEADING OCCU-PATIONS OF SIXTY SYSTEMS OR ROADS.

[Employés paid by the mile, trip, piece, contract, or commission are excluded.—The occupations noted as included under the several titles on pages 84 to 107 are here also included.]

The question very naturally arises, when considering these tables, what are the different rates of pay and earnings for different parts of the United States, and how do the different rates and earnings for different parts compare with the rates and earnings for the whole? It was for this purpose that the groupings stated in the first chapter were made, and reference to the map in connection with what is now being said will show the comparisons of rates for the different parts of the country.

From the large tables, which enter fully into details, the following brief table has been constructed. This table shows for each group separately and for all combined the average daily rate of pay, the average time actually employed, and the average annual earnings actually paid in each leading occupation.

AVERAGE DAILY RATE AND AVERAGE ACTUAL ANNUAL TIME AND EARNINGS IN LEADING OCCUPATIONS OF SIXTY SYSTEMS OR ROADS.

[Employés paid by the mile, trip, piece, contract, or commission are excluded.—The occupations noted as included under the several tities on pages 84 to 107 are here also included.]

The comparisons to be made from this table are exceedingly interesting and valuable. A glance shows the highest daily rate of pay to be in group VII (the Pacific states), and the next highest in group V (the southwestern states); but in group I (the New England states), which stands third in daily rate, the greatest steadiness of employment is found, the average number of days employed in the year being noticeable higher than in any other group; as a result of comparatively high pay and steady work, the annual earnings for the New England group are considerably above any of the others. Next below this group may

be placed group II (the middle Atlantic states), the daily rate and the days employed both being a little lower, the daily pay, however, differing not much from that of group IV (the central northern states) or from group VI (the northwestern states), in both of which, and particularly the latter, the days employed are less. Lowest of all, both in regard to rate of pay and steadiness of work, stands group III (the central south Atlantic and Gulf states). Considering the last three columns, where all the groups are combined, we see the daily rate of \$3.22½ paid to engineers, \$3.19 to enginemen, \$2.33 to conductors, \$2.45½ to masons, \$2.19 to blacksmiths, \$2.18 to machinists, \$1.98 to carpenters, \$1.95 to painters, \$1.88 to foremen, \$1.79½ to firemen, \$1.78 to brakemen, \$1.63 to baggagemasters, \$1.51 to baggagemen, \$1.50½ to switchmen, \$1.43½ to telegraph operators, \$1.26 to laborers, and \$1.13 to flagmen. The annual earnings of these several classes run from \$773 for enginemen down to \$123 for laborers.

These figures are exceedingly interesting, and, from their perfectly scientific nature, very valuable, for they are the result of as perfect a classification as can possibly be made from the actual payrolls of the roads involved.

The railroad men may inquire how they compare, so far as rates of pay and average annual earnings are concerned, with their comrades in Great Britain. At the close of this volume will be found a table, taken from the official returns, of the rates of wages paid to railway servants on the principal lines in Great Britain, compiled by the Amalgamated Society of Railway Servants of England, Ireland, Scotland, and Wales. A brief summary of that table is here appended; its daily rates can be compared with those of this country on the preceding page, but its theoretical earnings must be compared with those for the United States on pages 147-to 159.

AVERAGE DAILY RATES AND THEORETICAL AVERAGE ANNUAL EARNINGS IN GREAT BRITAIN AND THE UNITED STATES COMPARED.

GREAT BRITAIN	۲.		UNITED STATES.					
Occupations.	Daily rate.	Theoretical annual earnings.	Occupations.	Daily rate.	Theoreti- cal annual earnings.			
Engineers and drivers	\$1.46 .91 .97 .85 .81	\$457.00 285.00 304.00 266.00 254.00	Engineers and enginemen Firemen	\$3, 22 1, 794 2, 63 1, 504 1, 13	\$1,007.00 562.00 824.00 471.00 354.00			

The wages of guards on British roads and of conductors on American roads are not fairly comparable, because the conductor of an American road is responsible financially and for the proper movement of his train under telegraphic instructions. The British guard is not so responsible. The compensation of an American passenger conductor is, therefore, much larger, relatively, than that of a British guard.

Since the report from which the figures for Great Britain are drawn was published there have been some concessions made to railway men in England; for instance, the men in the employ of the Southeastern railway company have been granted the following concessions:

Sunday duty to be in future time and a quarter, and no Sunday time to be taken to make up sixty hours on week days. Ten hours for week days, and eight hours after sixty hours have been worked. When men are called upon to come on duty and not required afterward, they are to have five hours, which was previously two and one-balf hours.

are to have five hours, which was previously two and one-half hours.

Pay.—Drivers are to have, first year, \$1.34 per day, and firemen, 85 cents; second year, \$1.46 and 91 cents; third year, \$1.58 and 97 cents; fourth year, \$1.70 and \$1.03; fifth year, \$1.70 for drivers and \$1.10 per day for firemen when passed for drivers. In the sixth and seventh years engine drivers are to get respectively \$1.70 and \$1.83 per day. After ten years' driving 10 per cent. of the men to get \$1.95 per day, and they must be men of good character.

and they must be men of good character.

One free pass per year for each man. Privilege tickets are to be granted to each man and his wife and family once a month, and if abused in any way, the first time to pay full fare and forfeit the right to these for twelve months, and the second time to be dismissed from the service. In case any man does not get sixty hours per week he is to complain to the foreman.

The general time employed in England is practically eleven hours, and there are differences of rates of pay at commencement of service, the rise being gradual up to a maximum. This is true in many respects in regard to the pay of certain classes of railway labor in this country, especially as to enginemen and conductors.

THE DISTRIBUTION OF LABOR.

One of the most interesting features which attracts the attention under a close examination of the analytical tables which have been given and the study of the general tables is the great variation between the number of men actually employed during a year, as individuals, and the number of men which would be necessary to accomplish like results, provided full time was worked by each. In order to ascertain this variation two tables have been evolved and are given herewith. The first relates to the selected occupations used in the foregoing tables, for which occupations there are shown the number of different or individual employés on the various roads, the total days employed, the total earnings, the average days employed, and the average earnings. In parallel columns with these facts are shown, firstly, the number of employes which would be necessary, if working on full time of three hundred and thirteen days, to accomplish the same results as were accomplished by the whole number of individual employes who worked during the year, and, secondly, what the average earnings would have been for each of such necessary employés. The second table shows the same facts and conditions, with average daily rates added, for all the employés on the whole sixty systems or roads. These tables are as follows:

[Employée paid by the mile, trip, piece, contract, or commission are excluded.—The occupations noted as included under the several titles on pages 84 to 107 are here also included.]

To illustrate by specific reference to these tables, let us take brakemen: On 58 roads there were employed during the year 20,117 different individuals, the average days employed for each of one of these being 113, and the average annual earnings \$202. Now, if 7,276.18 men had been employed the full year, they would have performed all the service that was performed by the whole 20,117 individual brakemen, and they would have received \$557 each for their year's labor. But leaving the consideration of specific occupations, the first of the last tables giving all the figures so clearly that they need not be reproduced in text, the great fact as to all the employés and the distribution or fluctuation of labor for the roads as a whole, offers a more interesting study. The last table shows all the actual and theoretical conditions for each of the roads involved in this investigation, so far as those employés are concerned whose service can be reduced to time. The total column gives us these facts: On the 60 roads there were employed 224,570 individual men

whose services could be reduced to actual time. They were employed, on an average, 147 days each, and they received \$243 average actual earnings for the year employed. Now, these men (224,570) were employed to fill 105,807.14 positions; in other words, if 105,807.14 men had been employed on full time they would have accomplished the same results that were accomplished by the greater number working on an average but 147 days each during the year. The differences in the variation between the actual and necessary number of employés, as indicated by the occupation, are such as might occur to one's mind. Bringing forward the results for each of the seventeen selected occupations, we have the following:

ACTUAL AND THEORETICAL NUMBER OF EMPLOYES COMPARED IN LEAD-ING OCCUPATIONS OF SIXTY SYSTEMS OR ROADS.

Occupation.	Actual con- dition— different employés.	Theoretical condition— necessary employés.	Ratio of necessary to actual employés.
Baggagemasters	1, 104	822, 34	1 to 1.34
Baggagemen		633, 63	1 to 1.56
Blacksmiths		947, 54	1 to 1.51
Brakemen		7, 276, 18	1 to 2.76
Carpenters		4, 348, 50	1 to 1.90
Conductors		3, 431, 54	1 to 1. 51
Engineera		2, 254, 63	1 to 1.32
Enginemen		771. 98	1 to 1. 20
Firemen		2, 835, 20	1 to 2.09
Flagmen		1, 308, 19	1 to 1.59
Foremen		5, 576, 50	1 to 1. 27
Laborers		27, 938, 69	1 to 3. 20
Machinista		2, 777, 06	1 to 1.62
Masons		258.76	1 to 3. 38
Painters		859, 89	1 to 1.8
Switchmen		2, 390, 13	1 to 1.78
Telegraph operators		2, 202, 55	1 to 1.9

The last column in the foregoing statement means, under baggage-masters, for instance, that to 1 necessary employé, or to 1 employé necessary to perform the duty of the position for a whole year, there were employed during the year of the investigation 1.34 employés. The larger proportions are brakemen, 2.76 employés to 1 necessary employé; firemen, 2.02 employés to 1 necessary employé, and laborers, which constitute the largest class of railroad labor, 3.20 actual employés to 1 necessary employé. The largest ratio in the column is for masons, it being 3.38 actual employés to 1 necessary employé; but this large proportion is easily understood from the fact that masons oftener than others, perhaps, are called in to do particular jobs of work, and are not in any sense steady railway employés.

I do not remember having seen this feature, the tendency of labor to migration, brought out statistically on any extended scale before. This constitutes a new phase in the labor question. What were the men doing the remainder of the year? Were they unemployed? Did they shift from one position to another on the same road? Did they work a while on one road and then enlist in the service of another?

Were there concentrations of labor at certain seasons of the year! These are questions which cannot be answered at present. It is true that many of the men, especially those employed as trackmen, have to lose much time in waiting; others, unskilled laborers, in the same way lose much time; but the higher grades must be quite constantly employed—in fact, the tables would indicate it. It was impossible, however, from the payrolls to ascertain either the causes of lost time or the extent to which men shift their positions, or the extent to which men are recounted. If a man borne on the rolls of railroad No. 50 worked but 88 days in the year, and then worked 20 days on road No. · 51, 60 days on road No. 52, and a month on road No. 53, he would appear in the whole number of employés as four men, and he might have been employed among them all perhaps a full year, or nearly a full year. To determine this migratory habit was impossible under the present investigation, and in order to settle the question as to the cause or causes of this fluctuation in railroad labor additional investigations would have to be made. Whether this serious fluctuation in railroad labor compares favorably or unfavorably with like features in productive industry cannot at present be stated. In the series of reports which this Department will issue during the next few months opportunity will be secured for comparisons in this respect, as between railroad labor and labor in the great iron, cotton, and woollen industries, not only in this country but also in other countries, which will show the extent of the movement of labor, and a series of comparisons thus instituted may lead to a line of investigation which will throw some light upon the causes.

It will be remembered that, as stated by the Interstate Commerce Commission, the whole number of employés on the railroads of the United States June 30, 1889, was 689,912, approximately. This number represents the average number of employés in the service of all the roads of the country. The average number of employés means the number required to fill all the positions necessary for the management of the railroads. Applying the same ratio of necessary to actual employés, as was ascertained by the investigation of the 60 roads, it would require 1,462,613 men to perform the labor on the railroads of the country during one year; that is to say, if 689,912 men were employed, on an average, during a year, in the service of the railroads of the United States, there must have been about 1,462,613 different individuals employed during the same time in the same service. No one should conclude from these statements that there are constantly out of employment 700,000 or 800,000 railroad men every year, because no such conclusion can be sustained by anything contained in this report; in fact, as just stated, this feature of labor offers a new problem for discussion and for investigation, and it must be left to further study before the exact amount of idleness can be stated, in contradistinction to the exact amount of migration.

TOURS OF DUTY.

The impression prevails very largely that railroad men are on duty a large number of hours daily, and that they take very long runs. is difficult to show the extent to which this is true, but it is evident from the facts collected that the popular impression is somewhat exaggerated. The facts were obtained for the 60 roads under investigation. It will be remembered that out of the 241,910 railway employés involved in the investigation 17,340 were employed by the trip, run, or piece, all others being generally employed at regular hours per day. From statements regarding those who work or are paid by the tour. the run, or the piece, the highest have been selected, as illustrating the severity, so far as it exists, of railway service, the highest meaning the longest runs, the largest number of hours daily in service and on the train. Only those instances in which the service daily is 12 hours or more have been embodied in the following statement:

Applies to conductors and brakemen only. Applies to conductors and brakemen only.

The foregoing are given, not as a complete statement of all cases of long runs, but as the most emphatic examples which have been found. It will be observed that in all the above cases, while the number of hours in service is large, the number of hours actually on the train during the hours of service is in some instances quite small, the largest number of hours on the train in any one day being 15h.30m. on road No. 18 in group IV; and the largest number of hours in continuous service 24 on road 34 in group II, with a run of 195.52 miles; but while this run kept the trainmen in service 24 hours continuously, they were on the train but 10h. 25m., during two days, and then were laid off the third. In one case, on road No. 35, group I, some of the trainmen are in service continuously 26h. 15m., but they are actually on the train but 7h. 20m., and this routine is kept up four days in each week. Of course the 26h. 15m., as stated in "Hours daily," could not be strictly true; but it means that they were in continuous service 26h. 15m., the run of 210.22 miles taking 26h. 15m. to complete it, but the waits and other reliefs during the 26h. 15m. were so long and so numerous, that the men were actually on the train but 7h. 20m. four days in each week. While, therefore, it sounds extremely severe to say that men were in service 26h. 15m. consecutively, the actual facts offer much modification to the prevailing impression.

The mental strain of long tours of duty, where men are kept continuously on the road for hours without opportunity to rest, is so great as to render the service too faulty to allow it to any great extent. The danger of disaster through an overstrained mind and an exhausted body will prevent to a large degree the general adoption of long runs and long hours. In fact, the attending dangers are so great, that runs and hours must be reduced in length from time to time.

Long runs, while seemingly long as to the number of miles, are often so divided or relieved by days off that their severity is reduced. As these long runs and long hours in service apply to enginemen, firemen, conductors, brakemen, and baggagemasters, it is very natural that the public should get the impression it has relative to the severity of railway duty, and this impression is too largely justified, probably, by the facts; yet the attempt is constantly made, so far as the information of this office is concerned, to temper this severity by relays and lay-offs. The extreme cases of enginemen running several hundred miles without relief are those that come to the public mind.

CHAPTER IV.

GENERAL TABLES.

Table I.—Statement for each particular rate of daily pay in every occupation in ten selected systems or roads of the number of persons at such rate, classified by days worked in one year, and by amount of earnings for one year. For convenience of handling the occupations are grouped as follows:

Occupations in which earnings are rarely above \$500.

Occupations in which earnings are frequently from \$500 to \$1,000.

Occupations in which earnings are frequently from \$1,000 to \$2,000.

TABLE II.—Statement by groups of daily rates of pay, each group having a range of 20 cents, for every occupation in sixty systems or roads combined, of the number of persons in each of such groups, classified by days worked in one year, and by amount of earnings for one year. The subdivision into three classes according to size of annual earnings shown in Table I is not used in this table:

TABLE III.—Statement for all employes, without reference to occupation, of sixty systems or roads combined, by groups of daily rates, each group having a range of 20 cents, of days worked in one year, and of amount of earnings for one year. The subdivision into three classes according to size of annual earnings shown in Table I is not used in this table.

TABLE IV.—Statement in the same form as and based on the data of the preceding table showing per cents. of number of employes.

Table V.—Statement for each occupation in each of sixty systems or roads combined, of the number in that occupation, the average days worked per employé in the year, and the average earnings per employé for the year. The subdivision into three classes according to size of annual earnings shown in Table I is not used in this table.

Table VI.—Statement for various railways in Great Britain of minimum and maximum daily rates of pay in different occupations.

TABLE I.—CLASSIFIED TIME AND EARNINGS.

BAILBOAD NO. 16 (GROUP II).

OCCUPATIONS IN WHICH EARNINGS ARE RARELY ABOVE \$500.

[For explanation of railroad and group numbers used in the title above, see Chapter I, Introduction. In the case of employés who worked at two or three different daily rates of pay their entire earnings were divided by the entire days worked and they were then classed under that one of their daily rates to which this quotient was the nearest. Computation also was used to determine the average daily earnings of employés working by the month or hour. They are tabulated at the exact rates so arrived at. It was not possible to reduce to a daily rate basis the employés paid by the mile, trip, commission, etc., therefore they are given a separate line at the close of an occupation.]
